Urban Vegetation:

Urban Ecology John Marzluff, Eric Shulenberg, Wilfried Endlicher, Marina Alberti, Gordon Bradley, Clare Ryan, Craig ZumBrunnen, Ute Simon, 2008-01-03 Urban Ecology is a rapidly growing field of academic and practical significance. Urban ecologists have published several conference proceedings and regularly contribute to the ecological, architectural, planning, and geography literature. However, important papers in the field that set the foundation for the discipline and illustrate modern approaches from a variety of perspectives and regions of the world have not been collected in a single accessible book. *Foundations of Urban Ecology* does this by reprinting important European and American publications, filling gaps in the published literature with a few targeted original works and translating key works originally published in German. This edited volume will provide students and professionals with a rich background in all facets of urban ecology. The editors emphasize the drivers, patterns, processes, and effects of human settlement. The papers they synthesize provide readers with a broad understanding of the local and global aspects of settlement through traditional natural and social science lenses. This interdisciplinary vision gives the reader a comprehensive view of the urban ecosystem by introducing drivers, patterns, processes, and effects of human settlements and the relationships between humans and other animals, plants, ecosystem processes, and abiotic conditions. The reader learns how human institutions, health, and preferences influence and are influenced by the other members of their shared urban ecosystem.

Routledge Handbook of Urban Biodiversity Charles H. Nilon, Myla F.J. Aronson, 2023-10-16 This handbook provides a state-of-the-art comprehensive overview of the expanding field of urban biodiversity. The field of urban biodiversity has emerged from within the broad discipline of urban ecology in the past two decades and is now a significant field in its own right. In view of this, the *Routledge Handbook of Urban Biodiversity* presents a thorough treatment of this field, detailing the history of urban biodiversity, theoretical foundations, current state of knowledge, and application of that knowledge. The handbook is split into four parts: Part I: Setting the Stage for Urban Biodiversity Research and Practice; Part II: Foundational Concepts and Theory in Urban Biodiversity Research; Part III: Population and Community Ecology of Key Urban Taxa; Part IV: Urban Biodiversity Practice: Management, Planning, and Design for Healthy Communities. This volume contains interdisciplinary and global contributions from established and early-career academics as well as professionals and practitioners addressing two key fields in urban biodiversity: fundamental research focused on answering questions about the mechanisms explaining the distribution of species among and within cities, and applied research and work by practitioners to address concerns about urban biodiversity conservation, restoration, planning, design, and public involvement. This handbook is essential reading for students, academics, and professionals interested and working in the fields of urban biodiversity, ecology, nature conservation, urban planning, and landscape architecture. Chapters 15 and 22 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 International license.
