Towards a Sustainable Bioeconomy: Principles, Challenges and Perspectives Walter Leal Filho, Diana Mihaela Pociovălișteanu, Paulo Roberto Borges de Brito, Ismar Borges de Lima, 2018-01-19 This book gathers contributions from scientists and industry representatives on achieving a sustainable bioeconomy It also covers the social sciences economics business education and the environmental sciences There is an urgent need to optimise and maximise the use of biological resources so that primary production and processing systems can generate more food fibre and other bio based products with less environmental impacts and lower greenhouse gas emissions In other words we need a sustainable bioeconomy a

term that encompasses the sustainable production of renewable resources from land fisheries and aquaculture environments and their conversion into food feed fibre bio based products and bio energy as well as related public goods Despite the relevance of achieving a sustainable bioeconomy there are very few publications in this field Addressing that gap this book illustrates how biological resources and ecosystems could be used in a more sustainable efficient and integrated manner in other words how the principles of sustainable bioeconomy can be implemented in practice Given its interdisciplinary nature the field of sustainable bioeconomy offers a unique opportunity to address complex and interconnected challenges while also promoting economic growth It helps countries and societies to make a transition and to use resources more efficiently and shows how to rely less on biological resources to satisfy industry demands and consumer needs The papers are innovative cross cutting and include many practice based lessons learned some of which are reproducible elsewhere In closing the book prepared by the Inter University Sustainable Development Research Programme IUSDRP and the World Sustainable Development Research and Transfer Centre WSD RTC reiterates the need to promote a sustainable bioeconomy today

Being Mindfully Green: The Effects of Consumer Mindfulness on Green Product Choices Sabina Dörner, 2022-03-21 Research Paper postgraduate from the year 2021 in the subject Psychology Work Business Organisation grade 1 0 Maastricht University language English abstract Research indicates that mindfulness is a consumer characteristic that influences the choice

between green and non green products Therefore this research proposal examines the effects of consumer mindfulness on green product choices and the moderating role of cognitive load in this relationship The study predicts that consumer mindfulness leads to the choice of greener products and that this effect is attenuated by cognitive load A between subject experimental study will be conducted with a sample of 128 students from Maastricht University The research hypotheses will be tested using a binary logistic regression I propose that mindfulness significantly predicts green product choices suggesting that mindful consumers are more likely to choose green products than non mindful consumers Furthermore cognitive load will moderate the effects of mindfulness on green product choices When cognitive load is high consumers are less likely to purchase green products when they are mindful than when cognitive load is low From the research results it can be inferred that encouraging consumers to be mindful is beneficial in promoting the purchase of sustainable products when cognitive load is kept low In addition the study identifies limitations and gives recommendations for future research
