Explain the model, its purpose and what is derived after using the model. Define a benefit of stochastic modeling has been mentioned in the same context.

It is a mathematical approach of representing data or predicting outcomes in situations where there is randomness or unpredictability to some extent.

Parameters like input materials, reliability of machine and competence within the employees have an impact on the outcome of the manufacturing process but it is impossible to measure them with absolute values.

This modeling strategy helps in predicting the result of the process with some defined error rate by considering the unpredictability of these factors.
