Stone Tool Use At Cerros:

Stone Tool Use at Cerros Suzanne M. Lewenstein, 2014-08-04 For centuries scholars have pondered and speculated over the uses of the chipped stone implements uncovered at archaeological sites. Recently a number of researchers have attempted to determine prehistoric tool function through experimentation and through observation of the few remaining human groups who still retain this knowledge. Learning how stone tools were made and used in the past can tell us a great deal about ancient economic systems, exchange networks, and the social and political structure of prehistoric societies. Suzanne M. Lewenstein used the artifacts from Cerros, an important Late Preclassic (200 BC–AD 200) Maya site in northern Belize, to study stone tool function. Through a comprehensive program of experimentation with stone tool replicas, she was able not only to infer the tasks performed by individual tool specimens but also to recognize a wide variety of past activities for which stone tools were used. Unlike previous works that focused on hunter-gatherer groups, *Stone Tool Use at Cerros* is the first comprehensive experimental study of tool use in an agricultural society. The lithic data are used in an economic interpretation of a lowland Maya community within a hierarchically complex society. Apart from its significance to Maya studies, this innovative work offers the beginnings of a reference collection of identifiable tool functions that may be documented for sedentary complex society. It will be of major interest to all archaeologists and anthropologists, as well as those interested in economic specialization and artisanry in complex societies. *Stone Tool Use at Cerros* Suzanne M. Lewenstein, 1984

Archaeology of Ancient Mexico and Central America Susan Toby Evans, David L. Webster, 2001 This reference is devoted to the pre-Columbian archaeology of the Mesoamerican culture area, one of the six cradles of early civilization. It features in-depth articles on the major cultural areas of ancient Mexico and Central America, coverage of important sites including the world-renowned discoveries, as well as many lesser-known locations, articles on day-to-day life of ancient peoples in these regions, and several bandw regional and site maps and photographs. Entries are arranged alphabetically and cover introductory archaeological facts, flora, fauna, human growth and development, nonorganic resources, chronologies of various periods (Paleoindian, Archaic, Formative, Classic, and Postclassic), and Colonial cultural features. Maya regional summaries, research methods, and resources, ethnohistorical methods and sources, and scholars and research history. Edited by archaeologists Evans and Webster, both of whom are associated with Pennsylvania State University. c. Book News, Inc. *The Technology of Maya Civilization* Zachary X. Hruby, Geoffrey E. Braswell, Oswaldo Chinchilla Mazariegos, 2014-10-14 The ancient Maya shaped their world with stone tools. Lithic artifacts helped create the cityscape and were central to warfare and hunting, craft activities, cooking, and ritual performance. *The Technology of Maya Civilization* examines Maya lithic artefacts made of chert, obsidian, silicified limestone, and jade to explore the relationship between ancient civilizations and natural resources. The volume presents case studies of archaeological sites in Guatemala, Mexico, Belize, and Honduras. The analysis draws on innovative anthropological theory to argue that stone artefacts were not merely

cultural products but tools that reproduced modified and created the fabric of society *The Artifacts of Tikal--Utilitarian Artifacts and Unworked Material* Hattula Moholy-Nagy, 2013-04-23 Occupied continuously for 1 500 years Tikal was the most important demographic economic administrative and ritual center of its region The collection of materials recovered at Tikal is the largest and most diverse known from the Lowlands This book provides a major body of primary data The artifacts represented by such raw materials as chert and shell are classified by type number condition possible ancient use form material size and such secondary modifications as decoration and reworking as well as by spatial distribution occurrence in the various types of structure groups recovery context and date The same format with the exception of typology is used for unworked materials such as mineral pigments and vertebrate remains While few artifact reports go beyond a catalog of objects organized by type or raw material this report puts the materials into their past cultural contexts and thus is of interest to a wide range of scholars Content of this book s CD ROM may be found online at this location <http://core.tdar.org/document/376593> University Museum Monograph 118 [Rock Quarries and the Manufacture, Trade, and Uses of Stone Tools and Symbolic Stones in the Central Highlands of Irian Jaya, Indonesia](#) Orville Winston Hampton, 1997 From both ethnoarchaeological and ethnogenesis perspectives the complete cycle of quarrying manufacture trade and uses of stone tools and symbolic stones and the creation of other kinds of material goods and associated behavior within cultural systems of different language speaking groups are documented and analyzed Two adjacent stone tool use and trade regions are defined by the distribution and uses of mutually exclusive kinds and styles of profane ground stone tool blades In the Grand Valley and West region ground stone axes and adze blades knives and chisels are manufactured and traded outward along complex trade linkages from two internal independently operated and geographically separated quarry and manufacturing centers to the exclusion of adze blades and knives of distinctly different styles that are manufactured and traded within the adjoining Yali and East region Tool blades trade freely across language boundaries within the two regions Profane symbolic stones trade across the regional boundary from west to east Slightly differing types of quarry ownership operational technology including uses of fire and production techniques are discussed and shown at the different quarry manufacturing centers As much as 25 40 percent of axe adze blades and chisels were removed by users from secular use and converted to spiritually powerful sacred symbolic ancestor stones and to empowered sacred tools all hierophanies of great cultural importance Adze blades and chisels were of particular importance in their uses as power objects in shamans religio medical kits Profane display exchange stones and sacred ancestor stones were the cultural binders without which the cultures would have ceased to exist as they did These symbolic stones were combined with perishable organic materials as decoration to visually transmit important cultural information In addition the uses of fiber string stems of grass a few leaves and a certain root were essential to maintain the continuum of supernatural power from unknown places in the domain of the unseen into those durable stone objects that had been selected to be made sacred The sociopolitical and to a lesser extent the

Stone Tools and Mobility in the Illinois Valley George H. Odell, 1996 This study aims to compile a unified set of lithic analyses for the prehistory of the area to compare the components with one another with respect to parameters on which stone tools are relevant and to provide new interpretations of North American prehistoric hunter gatherer mobility organisation and sedentism

Chipped Stone Tool Use in the Maya Coastal Economies of Marco Gonzalez and San Pedro, Ambergris Caye, Belize William James Stemp, 2001 The Maya sites of Marco Gonzalez and San Pedro are located on the southern end of Ambergris Caye off the coast of modern day Belize Analysis of the stone tools recovered from excavations at Marco Gonzalez and San Pedro and a study of the use wear patterns on these artifacts reveals that the Maya from both sites were primarily engaged in subsistence based activities with a limited amount of small scale craft production Use wear evidence suggests that most of these activities focused on the exploitation of local resources necessary in everyday life In addition to local and regional trade of marine resources and salt the sites served as transshipment points for long distance exchange along the coast Such relationships assisted the Maya from southern Ambergris Caye in surviving the breakdown in trade relations and depopulation that plagued other Maya centres in the Late to Terminal Classic periods and well into the Late Postclassic

Mesoamerican Lithic Technology Kenn Hirth, 2003 Any overview of prehispanic society in the Americas would identify its obsidian core blade production as a unique and highly inventive technology Normally termed prismatic blades these long parallel sided flakes are among the sharpest cutting tools ever produced by humans Their standardized form permitted interchangeable use and such blades became the cutting tool of choice throughout Mesoamerica between 600 800 B C Because considerable production skill is required increased demand may have stimulated the appearance of craft specialists who played an integral role in Mesoamerican society Some investigators have argued that control over obsidian also had a significant effect on the development and organization of chiefdom and state level societies While researchers have long recognized the potential of obsidian studies recent work has focused primarily on compositional analysis to reconstruct trade and distribution networks Study of blade production has received much less attention and many aspects of this highly evolved craft are still lost This volume seeks to identify current research questions in Mesoamerican lithic technology and to demonstrate that replication studies coupled with experimental research design are valuable analytical approaches to such questions

the archaeological evidence and examines it in terms of settlement trade and subsistence patterns It is based on the author's BA thesis at the University of South Florida **Handbook of Archaeological Methods** Herbert D. G.

Maschner, Christopher Chippindale, 2005 The Handbook of Archaeological Methods comprises 37 articles by leading archaeologists on the key methods used by archaeologists in the field in analysis in theory building and in managing cultural resources The book is destined to become the key reference work for archaeologists and their advanced students on contemporary archaeological methods **The Lithic Production System of the Princess Point Complex During the Transition to Agriculture in Southwestern Ontario, Canada** Chen Shen, 2001 This study examines the lithic production systems of the Princess Point Complex of southwestern Ontario Canada which represents a transitional culture from the Middle to Late Woodland in northeast North America ca AD 500 - 1 000 The analyses aim to reconstruct the pattern of Princess Point lithic production and to explore the transformation of lithic production in relation to the emergence of food production in the study region The lithic data comes from a three year field investigation at the Grand Banks Lone Pine and Young 1 sites The results of lithic analyses demonstrate that the Grand Banks industry represents a generalized stone tool production It suggests that the shift from specialized to generalized stone tool production as a long term technological change is likely associated with the introduction of horticulture **Fifty Years of Good Reading** University of Texas Press, 2000 This three volume set presents a best of the best selection from the University of Texas Press's first half century
