The Meteorology of Posidonius J.J. Hall, 2023-07-28 This volume describes the meteorology of the Stoic philosopher Posidonius from the existing fragments and discusses his relation to earlier thinkers on this subject as well as the methods he used to obtain information about and to find explanations of meteorological phenomena The book examines ancient meteorology an aspect of ancient thought largely neglected by scholars Hall produces a detailed account of how Posidonius and other ancient thinkers approached and attempted to explain meteorological phenomena phenomena familiar to everyone which could not be ignored in attempts to understand the natural world but were difficult to explain satisfactorily and convincingly despite the efforts of important ancient thinkers The volume explores particular classes of phenomena including climatic events and geological processes providing a comprehensive overview of Posidonius ideas on these topics Concluding chapters allow for an assessment of Posidonius particular contribution to the field and his influence on later writers working on this subject The Meteorology of Posidonius provides an important resource for students and scholars working on ancient philosophy and ancient science particularly ancient meteorology *Maximum Entropy and Ecology* John Harte, 2011-06-23 This pioneering graduate textbook provides readers with the concepts and practical tools required to understand the maximum entropy principle and apply it to an understanding of ecological patterns Rather than building and combining mechanistic models of ecosystems the approach is grounded in information theory and the logic of inference Paralleling the derivation of thermodynamics from the maximum entropy principle the state variable theory of ecology developed in this book predicts realistic forms for all metrics of ecology that describe patterns in the distribution abundance and energetics of species over multiple spatial scales a wide range of habitats and diverse taxonomic groups The first part of the book is foundational discussing the nature of theory the relationship of ecology to other sciences and the concept of the logic of

inference Subsequent sections present the fundamentals of macroecology and of maximum information entropy starting from first principles The core of the book integrates these fundamental principles leading to the derivation and testing of the predictions of the maximum entropy theory of ecology METE A final section broadens the book s perspective by showing how METE can help clarify several major issues in conservation biology placing it in context with other theories and highlighting avenues for future research
