Edmund Husserl

Thing And Space Lectures Of 1907:

Thing and Space Edmund Husserl, 1997-10-31 This is a translation of Edmund Husserl's lecture course from the Summer semester 1907 at the University of Göttingen. The German original was published posthumously in 1973 as Volume XVI of *Husserliana*. Husserl's *opera omnia*. The translation is complete including both the main text and the supplementary texts as *Husserliana* volumes are usually organized except for the critical apparatus which provides variant readings. The announced title of the lecture course was *Main parts of the phenomenology and critique of reason*. The course began with five relatively independent introductory lectures. These were published on their own in 1947 bearing the title *The idea of phenomenology I: The Five Lectures*. These comprise a general orientation by proposing the method to be employed in the subsequent working out of the actual problems, viz. the method of phenomenological reduction, and by clarifying at least provisionally some technical terms that will be used in the labor the subsequent lectures will carry out. The present volume then presents that labor, i.e. the method in action and the results attained. As such, this text dispels the abstract impression which could not help but cling to the first five lectures taken in isolation. Accordingly, we are here given genuine introductory lectures, i.e. an introduction to phenomenology in the genuine phenomenological sense of engaging in the work of phenomenology going to the matters at issue themselves rather than remaining aloof from them in abstract considerations of standpoint and approach.

Husserl David Woodruff

Smith, 2013-07-04 This second edition of David Woodruff Smith's stimulating introduction to Husserl has been fully updated and includes a new ninth chapter featuring contemporary issues confronting Husserl's phenomenology. It introduces the whole of Edmund Husserl's thought, demonstrating his influence on philosophy of mind and language, on ontology and epistemology, as well as ethical theory and on philosophy of logic, mathematics, and science. Starting with an overview of Husserl's life and works and his place in twentieth-century philosophy and in Western philosophy as a whole, Smith introduces Husserl's conception of phenomenology, explaining Husserl's innovative theories of intentionality, objectivity, subjectivity, and intersubjectivity. In subsequent chapters, Smith covers Husserl's logic, metaphysics, realism, and transcendental idealism, epistemology, and meta-ethics. Finally, the author assesses the significance and implications of Husserl's work for contemporary philosophy of mind and cognitive science. Also included is a timeline, glossary, and extensive suggestions for further reading, making Husserl's second edition essential reading for anyone interested in phenomenology, twentieth-century philosophy, and the continuing influence of this eminent philosopher.

Rediscovering Phenomenology Luciano Boi, Pierre Kerszberg, Frédéric Patras, 2007-07-18 This book proposes a new phenomenological analysis of the questions of perception and cognition which are of paramount importance for a better understanding of those processes which underlies the formation of knowledge and consciousness It presents many clear arguments showing how a phenomenological perspective helps to deeply interpret most fundamental findings of current research in neurosciences and also in mathematical and physical sciences

The Physiology and Phenomenology of Action A. Berthoz, Jean-Luc Petit, 2008 Though many philosophers of mind have taken an interest in the great developments in the brain sciences the interest is seldom reciprocated by scientists who frequently ignore the contributions philosophers have made to our understanding of the mind and brain In a rare collaboration a world famous brain scientist and an eminent philosopher have joined forces in an effort to understand how our brain interacts with the world Does the brain behave as a calculator combining sensory data before deciding how to act Or does it behave as an emulator endowed with innate models of the world which it corrects according to the results of experiences obtained by the senses The two authors come from very different backgrounds the philosopher Jean Luc Petit belongs to the philosophical tradition of Husserlian phenomenology Alain Berthoz has long been interested in the physiology of action movement posture decision making perception etc Drawing on cutting edge research from the cognitive sciences the authors have produced a highly original volume showing how phenomenology and physiology can interact to further our understanding of the brain and the mind

The Review of Metaphysics, 1998

Introduction to Husserlian Phenomenology Rudolf Bernet, Iso Kern, Eduard Marbach, 1993-06-18. This volume provides a valuable discussion of Husserl's lifelong project of the critique of science which makes no attempt to conflate the pre-World War I period of his thought with the later era.

Between You and I Beata Stawarska, 2009-10-06. Classical phenomenology has suffered from an individualist bias and a neglect of the communicative structure of experience especially the phenomenological importance of the addressee, the inseparability of I and You, and the nature of the alternation between them. Beata Stawarska remedies this neglect by bringing relevant contributions from cognate empirical disciplines such as sociolinguistics and developmental psychology as well as the dialogic tradition in philosophy to bear on phenomenological inquiry. Taken together, these contributions substantiate an alternative view of primary I-You connectedness and help foreground the dialogic dimension of both pre-discursive and discursive experience. *Between You and I* suggests that phenomenology is best practiced in a dialogical engagement with other disciplines.

Theoria Et Historia Scientiarum, 2003

The Mennonite Quarterly Review Harold Stauffer Bender, 2008

De la peinture en général et de la couleur en particulier Daniel Walravens, 2006. This generous monograph on the French monochrome painter Daniel Walravens, who has produced specialized colors for numerous paint manufacturers during the course of his illustrious four-decade-long career, features work from the 1980s through 2005 with extensive notes on the works at the end. It is the only monograph currently available on Walravens' work.

Husserl and Transcendental Intersubjectivity Dan Zahavi, 2001. Husserl and Transcendental Intersubjectivity analyzes the transcendental relevance of intersubjectivity and argues that an intersubjective transformation of transcendental philosophy can already be found in phenomenology, especially in Husserl. Husserl eventually came to believe that an analysis of transcendental intersubjectivity was a *conditio sine qua non* for a phenomenological philosophy. Drawing on both published and unpublished manuscripts, Dan Zahavi examines Husserl's reasons for this conviction and delivers a detailed analysis of his radical and complex concept of intersubjectivity, showing that precisely his reflections on transcendental intersubjectivity are capable of clarifying the core concepts of phenomenology, thus making possible a new understanding of Husserl's philosophy. Against this background, the book compares his view with the approaches to intersubjectivity found in Heidegger, Sartre, and Merleau-Ponty, and it then attempts to establish to what extent the phenomenological approach can contribute to the current discussion of intersubjectivity. This is achieved through a systematic confrontation with the language-pragmatical positions of Apel and Habermas.
