Thinking Machines and the Philosophy of Computer Science Jordi Vallverdú, 2010-01-01 This book offers a high interdisciplinary exchange of ideas pertaining to the philosophy of computer science from philosophical and mathematical logic to epistemology engineering ethics or neuroscience experts and outlines new problems that arise with new tools Provided by publisher

Abstractions and Embodiments Janet Abbate, Stephanie Dick, 2022-08-30 Cutting edge historians explore ideas communities and technologies around modern computing to explore how computers mediate social relations Computers have been framed both as a mirror for the human mind and as an irreducible other that humanness is defined against depending on different historical definitions of humanness They can serve both liberation and control because some people's freedom has historically been predicated on controlling others Historians of computing return again and again to these contradictions as they often reveal deeper structures Using twin frameworks of abstraction and embodiment a reformulation of the old mind body dichotomy this anthology examines how social relations are enacted in and through computing The authors examining Abstraction revisit central concepts in computing including algorithm program clone and risk In doing so they demonstrate how the meanings of these terms reflect power relations and social identities The section on Embodiments focuses on sensory aspects of using computers as well as the ways in which gender race and other identities have shaped the opportunities and embodied experiences of computer workers and users Offering a rich and diverse set of studies in new areas the book explores such disparate themes as disability the influence of the punk movement working mothers as technical innovators and gaming behind the Iron Curtain Abstractions and Embodiments reimagines computing history by questioning canonical interpretations foregrounding new actors and contexts and highlighting neglected aspects of computing as an embodied experience It makes the profound case that both technology and the body are culturally shaped and that there can be no clear distinction between social intellectual and technical aspects of computing Contributors Janet Abbate Marc Aidinoff Troy Kaighin Astarte Ekaterina Babinsteva Andr Brock Maarten Bullynck Jiahui Chan Gerardo Con Diaz Liesbeth De Mol Stephanie Dick Kelcey Gibbons Elyse Graham Michael J Halvorson Mar Hicks Scott Kushner Xiaochang Li Zachary Loeb Lisa Nakamura Tiffany Nichols Laine Nooney Elizabeth Petrick Cierra Robson Hallam Stevens Jaroslav velch

The Cybersecurity Body of Knowledge Daniel Shoemaker, Anne Kohnke, Ken Sigler, 2020-04-08 The Cybersecurity Body of Knowledge explains the content purpose and use of eight knowledge areas that define the boundaries of the discipline of cybersecurity The discussion focuses on and is driven by the essential concepts of each knowledge area that collectively capture the cybersecurity body of knowledge to provide a complete picture of the field This book is based on a brand new and up to this point unique global initiative known as CSEC2017 which was created and endorsed by ACM IEEE CS AIS

SIGSEC and IFIP WG 11.8 This has practical relevance to every educator in the discipline of cybersecurity. Because the specifics of this body of knowledge cannot be imparted in a single text, the authors provide the necessary comprehensive overview. In essence, this is the entry-level survey of the comprehensive field of cybersecurity. It will serve as the roadmap for individuals to later drill down into a specific area of interest. This presentation is also explicitly designed to aid faculty members, administrators, CISOs, policy makers, and stakeholders involved with cybersecurity workforce development initiatives. The book is oriented toward practical application of a computing-based foundation, crosscutting concepts, and essential knowledge and skills of the cybersecurity discipline to meet workforce demands. Dan Shoemaker, PhD, is full professor, senior research scientist, and program director at the University of Detroit Mercy's Center for Cyber Security and Intelligence Studies. Dan is a former chair of the Cybersecurity Information Systems Department and has authored numerous books and journal articles focused on cybersecurity. Anne Kohnke, PhD, is an associate professor of cybersecurity and the principle investigator of the Center for Academic Excellence in Cyber Defence at the University of Detroit Mercy. Anne's research is focused in cybersecurity risk management, threat modeling, and mitigating attack vectors. Ken Sigler, MS, is a faculty member of the Computer Information Systems (CIS) program at the Auburn Hills campus of Oakland Community College in Michigan. Ken's research is in the areas of software management, software assurance, and cybersecurity.

Where most research into social media is sociological in scope, Neal Thomas shows how the underlying material semiotic operations of social media now crucially define what it means to be social in a networked age. He proposes that we consider social media platforms as computational processes of collective individuation that produce rather than presume forms of subjectivity and sociality. **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1971 First multi-year cumulation covers six years 1965-70 **University of California Union Catalog of Monographs Cataloged by the Nine Campuses from 1963 Through 1967: Authors & titles** University of California (System).
