Psychology Library,1960      **Author Index to Psychological Index ... and Psychological Abstracts ...** ,1960      **Thinking Physics This Way** Kapur Mal Jain,2015-01-13 The book gives an account of the inspirations that initiated the enquiry into the physical world and its evolution as a discipline Simultaneously it motivates the reader to step ahead with a little dismay to undertake a journey in the astonishing world of physics It starts with the observation of nature and posits the questions which kept perplexing the mind of great physicists of our time In finding answers it verily explores the relationship of the observer with the object And while so doing it catapults the readers into the bizarre world of natural laws equations hypothesis and theorems The presentation reserves its difference unlike books published these days in the treatment of the subject without involving mathematics or without making tall claims of seeking wishful comparison between science and religion On the other hand it paves way to a systematic shift from traditional approach to newer and broader similarities between physical and the mental realities This effort gleans out a humane paradigm from where we see our known world in new light Therefore it asks for a limpid mind to welcome one into the world of physics This book presents physics not only as technology booster but also as life builder      *Light and Dark Matter* Richard Selvaggi,2010 *Light and Dark Matter* The Role of Critical Thinking Scientific Skepticism and Creativity in Physics This book uses critical thinking and scientific skepticism to define seven dilemmas of electromagnetic wave theory and deductively disprove destructive interference theory As a result the two hundred year old question of How are double slit diffraction pattern troughs produced remains unanswered Rigorous scientific methods and experiments are presented to confirm conservation of electromagnetic energy in the double slit diffraction pattern The double slit diffraction pattern is mapped to allow a clearer understanding of the path for the double slit troughs electromagnetic energy and light particles The double slit mapping experiment demonstrates that the electromagnetic energy and light particles follow an alternating path and are redistributed ten times over eight millimeters The alternating redirection of the electromagnetic energy and light particles represents acceleration

This acceleration requires the application of an unknown force and the consumption of an unknown energy. The presence of an unknown force and unknown energy in the double slit diffraction pattern cannot be explained by current light theories. A new theoretical foundation creatively re-conceptualizes how the double slit troughs or dark matter apply force and energy to redistribute electromagnetic energy and light particles. This book illustrates the scientific process as an iterative cycle of theory derived from physical phenomena, experimental design, and research. Within each step of the scientific process, there can be many iterative cycles of inductive reasoning and critical thinking. Rules such as administrative and technological constraints are intermingled with and impact the inductive reasoning and critical thinking iterative cycles. Scientific skepticism is the process of using critical thinking to confront theories and inductive thinking with the physical world. The iterative cycle of inductive reasoning, critical thinking, and scientific skepticism that results in a novel, innovative, and relevant process defines natural science creativity. The addition of a creative process such as deductively disproving destructive interference can extend the domain knowledge.
