Steiner,2017-10-23 Now when Jesus was born in Bethlehem of Judea in the days of Herod the king behold wise men from the East came to Jerusalem saying Where is he who has been born king of the Jews For we have seen his star in the East and have come to worship him These words begin a story that will be familiar to many whether from images on Christmas cards or school nativity plays or more directly from Christian teaching As often with images associated with Christmas they have the power to evoke all kinds of feelings from joy and hope to sorrow and doubt But what do we really know of the birth of Jesus and who were the mysterious wise men that are reported to have visited him In this freshly collated anthology of Rudolf Steiner s lectures complemented with illuminating commentary by editor Margaret Jonas we are offered solutions to the

riddles surrounding Jesus's birth and the seemingly conflicting accounts within Christian scripture. Could there have been two different births in other words two infants both named Jesus born to two sets of parents? From the mystery of the birth we are led to a study of the three wise men who are mentioned in only one of the four Gospel accounts. Who were they? What was their teaching and what was the meaning of the star they followed? And why did they offer gifts of gold, frankincense, and myrrh to the baby Jesus? *The Three Wise Men* offers solutions to the enigma of the identity and spiritual backgrounds of these magisterial figures and also provides suggestions as to their possible future roles in the drama of human development. Featuring colour images, this original thought-provoking book is a wonderful gift for anyone seeking to understand the birth of Jesus and the wise men from the East. *Belief and Incompleteness* Kurt Konolige, Center for the Study of Language and Information (U.S.), 1984. Both agents are state-of-the-art constructions incorporating the latest AI research in chess playing, natural language understanding, planning, etc. But because of the overwhelming combinatorics of chess, neither they nor the fastest foreseeable computers would be able to search the entire game tree to find out whether White has a forced win. Why then do they come to such an odd conclusion about their own knowledge of the game? The chess scenario is an anecdotal example of the way inaccurate cognitive models can lead to behavior that is less than intelligent in artificial agents. In this case, the agent's model of belief is not correct. They make the assumption that an agent actually knows all the consequences of his beliefs. S1 knows that chess is a finite game and thus reasons that in principle, knowing the rules of chess is all that is required to figure out whether White has a forced initial win. After learning that S2 does indeed know the rules of chess, he comes to the erroneous conclusion that S2 also knows this particular consequence of the rules. And S2 himself, reflecting on his own knowledge in the same manner, arrives at the same conclusion, even though in actual fact he could never carry out the computations necessary to demonstrate it.
