Treating The Borderline Patient:

Treating The Borderline Patient Frank Yeomans, Michael A. Selzer, John F. Clarkin, 1992 [A Primer of Transference-Focused Psychotherapy for the Borderline Patient](#) Frank E. Yeomans, John F. Clarkin, Otto F. Kernberg, 2002-07-31 Treating borderline patients is one of the most challenging areas in psychotherapy because of the patient's extreme emotional expressions the strain it places on the therapist and the danger of the patient acting out and harming himself or the therapeutic relationship Many clinicians consider this patient population difficult if not impossible to treat However in recent years dedicated experts have focused their clinical and research efforts on the borderline patient and have produced treatments that increase our success in working with borderline patients Transference Focused Therapy TFP is psychodynamic treatment designed especially for borderline patients This book provides a concise and comprehensive introduction to TFP that will be useful both to experienced clinicians and also to students of psychotherapy TFP has its roots in object relations and it emphasizes that the transference is the key to understanding and producing change The patient's internal world of object representations unfolds and is lived in the transference with the therapist The therapist listens for and makes use of the relationship that is revealed through words silence or as often occurs in the case of individuals with some borderline personality disorder acting out in subtle or not so subtle ways This primer offers clinicians a way to understand and then use the transference and countertransference for change in the patient **Relationship Management Of The Borderline Patient** David L. Dawson, Harriet L. MacMillan, 2013-05-13 This volume offers guidelines for managing the therapist patient relationship during crisis intervention and longer term therapy with patients who exhibit borderline symptoms Since to do no harm is the primary goal of any therapist who encounters such a patient an appropriate therapist patient relationship is crucial moreover skillful management of this relationship can in itself be the most effective and safe treatment The authors present a conceptual model based on self psychology and interpersonal theory for reframing the borderline symptoms and the therapist's reactions Case examples demonstrate effective relationship management and therapeutic interventions **Management of Countertransference with Borderline Patients** Glen O. Gabbard, Sallye M. Wilkinson, 2000-10-01 Management of Countertransference with Borderline Patients is an open and detailed discussion of the emotional reactions that clinicians experience when treating borderline patients This book provides a systematic approach to managing countertransference that legitimizes the therapist's reactions and shows ways to use them therapeutically with the patient [Transference-Focused Psychotherapy for Borderline Personality Disorder](#) Frank E. Yeomans, John F. Clarkin, Otto F. Kernberg, 2015-04-01 Transference Focused Psychotherapy for Borderline Personality Disorder A Clinical Guide presents a model of borderline personality disorder BPD and its treatment that is based on contemporary psychoanalytic object relations theory as developed by the leading thinker in the field Otto Kernberg M D who is also one of the authors of this insightful manual The model is supported and enhanced by material on current phenomenological and neurobiological research and is

grounded in real world cases that deftly illustrate principles of intervention in ways that mental health professionals can use with their patients. The book first provides clinicians with a model of borderline pathology that is essential for expert assessment and treatment planning and then addresses the empirical underpinnings and specific therapeutic strategies of transference focused psychotherapy (TFP). From the chapter on clinical assessment, the clinician learns how to select the type of treatment on the basis of the level of personality organization, the symptoms, the patient's experiences, and the areas of compromised functioning. In order to decide on the type of treatment, the clinician must examine the patient's subjective experience, such as symptoms of anxiety or depression, observable behaviors, such as investments in relationships and deficits in functioning, and psychological structures, such as identity defenses and reality testing. Next, the clinician learns to establish the conditions of treatment through negotiating a verbal treatment contract or understanding with the patient. The contract defines the responsibilities of each of the participants and defines what the reality of the therapeutic relationship is. Techniques of treatment interventions and tactics to address particularly difficult clinical challenges are addressed next, equipping the therapist to employ the four primary techniques of TFP: interpretation, transference analysis, technical neutrality, and use of countertransference, and setting the stage for and guiding the proper use of those techniques within the individual session. What to expect in the course of long-term treatment to ameliorate symptoms and to effect personality change is covered with sections on the early, middle, and late phases of treatment. This material prepares the clinician to deal with predictable phases, such as tests of the frame, impulse containment, movement toward integration, episodes of regression, and termination. Finally, the text is accompanied by supremely instructive online videos that demonstrate a variety of clinical situations, helping the clinician with assessment and modeling critical therapeutic strategies. The book recognizes that each BPD patient presents a unique treatment challenge. Grounded in the latest research and rich with clinical insight, *Transference Focused Psychotherapy for Borderline Personality Disorder: A Clinical Guide* will prove indispensable to mental health professionals seeking to provide thoughtful, effective care to these patients. **The Borderline Patient** James S. Grotstein, Marion F. Solomon, Joan A. Lang, 2014-06-03. This volume focuses on treatment issues pertaining to patients with borderline psychopathology. The editors' concluding essay discusses the controversies and convergences among the different treatment approaches. *Borderline Personality Disorder* Perry D. Hoffman, Penny Steiner-Grossman, 2012-11-12. Explore and understand new approaches in Borderline therapy. Psychotherapy for Borderline Personality Disorder Anthony Bateman, Peter Fonagy, 2004

Borderline Personality disorder is a severe personality dysfunction characterized by behavioural features such as impulsivity, identity disturbance, suicidal behaviour, emptiness and intense and unstable relationships. Approximately 2% of the population are thought to meet the criteria for BPD. The authors of this volume, Anthony Bateman and Peter Fonagy, have developed a psychoanalytically oriented treatment to BPD known as mentalization treatment. With randomised controlled trials having shown this method to be effective, this book presents the first account of mentalization treatment for BPD. The first section gives an overview of BPD including discussion of nosology, epidemiology, natural history and psychosocial aetiology. It additionally summarises the present state of our research knowledge about effective psychotherapeutic treatments and use of medication. The second section outlines the authors' theoretical approach and contrasts it with other well known methods including DBT, CAT and CBT. In the extensive final section, the authors outline their clinical approach, starting with how treatment is organised. A detailed account of the transferable features of the model is provided along with the main strategies and techniques of treatment. Numerous clinical examples are given to illustrate the core techniques and detailed information provided about how to apply aspects of the mentalization based treatment approach in everyday practice. Aimed at mental health professionals along with counsellors, psychotherapists and psychoanalysts, the book will be a valuable tool providing an

effective means of treating those suffering from Borderline Personality Disorder **Understanding and Treating**

Borderline Personality Disorder Leonard Horwitz, 1996 Borderline Personality Disorder Tailoring the Psychotherapy to

the Patient explores the challenge of treating patients with borderline personality disorder. These patients make up a large segment of the difficult to treat population. The instability of their relationships, the intensity of their affective responses, and their proneness to paranoid reactions all contribute to their difficulty in working consistently and constructively in the psychotherapeutic situation. When one adds these difficult patient problems to the therapist's quandary about how expressive or supportive to be, therapists are indeed often confronted with a challenging therapeutic task. The book begins with a review of the clinical and research literature pertaining to the treatment of borderline patients. It presents a unique empirically based intensive study of three borderline patients based on transcripts of audiotaped therapy sessions. The research methodology is reviewed and clinically oriented descriptions of the three patients, their psychotherapy processes, and their outcomes are included. Following an overall summary of results, conclusions regarding the differential indications for supportive versus expressive emphasis in psychotherapy are discussed. In their research, the authors recorded every psychotherapy session and studied a randomly selected group of sessions. Therefore, the reader is provided with increased insight into what is most effective with what kind of patient at a given point in the therapy process.
