Tectonic Geomorphology Douglas W. Burbank,Robert S. Anderson,2011-11-21 Tectonic geomorphology is the study of the interplay between tectonic and surface processes that shape the landscape in regions of active deformation and at time scales ranging from days to millions of years Over the past decade recent advances in the quantification of both rates and the physical basis of tectonic and surface processes have underpinned an explosion of new research in the field of tectonic geomorphology Modern tectonic geomorphology is an exceptionally integrative field that utilizes techniques and data derived from studies of geomorphology seismology geochronology structure geodesy stratigraphy meteorology and Quaternary science While integrating new insights and highlighting controversies from the ten years of research since the 1st edition this 2nd edition of Tectonic Geomorphology reviews the fundamentals of the subject including the nature of faulting and folding the creation and use of geomorphic markers for tracing deformation chronological techniques that are used to date events and quantify rates geodetic techniques for defining recent deformation and paleoseismologic approaches to calibrate past deformation Overall this book focuses on the current understanding of the dynamic interplay between surface processes and active tectonics As it ranges from the timescales of individual earthquakes to the growth and decay of mountain belts this book provides a timely synthesis of modern research for upper level undergraduate and graduate earth science students and for practicing geologists Additional resources for this book can be found at www.wiley.com/go/burbank/geomorphology

Implementation and Applications of Automata Oscar H. Ibarra, Bala Ravikumar, 2008-07-23 The 13th International Conference on Implementation and Application of Automata CIAA 2008 was held at San Francisco State University San Francisco July 21-24, 2008. This volume of Lecture Notes in Computer Science contains the papers that were presented at CIAA 2008 as well as the abstracts of the poster papers that were displayed during the conference. The volume also includes the per extended abstract of the four invited talks presented by Markus Holzer, Kai Salomaa, Mihalis Yannakakis, and Hsu-Chun Yen. The 24 regular papers were selected from 40 submissions covering various topics in the theory, implementation, and applications of automata and related structures. Each submitted paper was reviewed by at least three Program Committee members with the assistance of external referees. The authors of the papers and posters presented in this volume come from the following countries: Australia, Belgium, Canada, China, Columbia, Czech Republic, France, Germany, Hungary, Italy, Japan, The Netherlands, Poland, Portugal, Romania, Russia, Spain, Sweden, Taiwan, United Arab Emirates, and USA. We wish to thank all who made this conference possible: the authors for submitting papers, the Program Committee members and external referees listed in the proceedings for their excellent work, and the four invited speakers. Finally, we wish to express our sincere appreciation to the sponsors, local organizers, and the editors of the Lecture Notes in Computer Science series and Springer in particular, Alfred Hofmann, for their help in publishing this volume in a timely manner.
