Trends In High Pressure Bioscience And Biotechnology:

Trends in High Pressure Bioscience and Biotechnology R. Hayashi, 2002-01-21 A world wide interest in the various aspects of high pressure in the field of biological science led to the First International Conference on High Pressure Bioscience and Biotechnology in Kyoto Japan High pressure bioscience encompasses the fields of food sciences pharmacy and medical fields and some high pressure techniques are used in the production of industrial products Moreover high pressure is a valuable tool for the study of natural macromolecules including biomembranes which are composed primarily of lipid and protein Many intermediate processes in the pressure induced protein unfolding have been discovered as a result This book covers the entire range of current high pressure bioscience and its possible applications *High-Pressure Bioscience and Biotechnology, Volume 1189* Douglas Hoyt Bartlett, Douglas H. Bartlett, 2010-03-29 The manipulation of biological materials using elevated pressure is providing an ever growing number of opportunities in both the applied and basic sciences Manipulation of pressure is a useful parameter for enhancing food quality and shelf life inactivating microbes viruses prions and deleterious enzymes affecting recombinant protein production controlling DNA hybridization and improving vaccine preparation In biophysics and biochemistry pressure is used as a tool to study intermediates in protein folding enzyme kinetics macromolecular interactions amyloid fibrous protein aggregation lipid structural changes and to discern the role of solvation and void volumes in these processes Biologists including many microbiologists examine the utility and basis of pressure inactivation of cells and cellular processes and conversely seek to discover how deep sea life has evolved a preference for high pressure environments This introduction and the papers that follow provide information on the nature and promise of the highly interdisciplinary field of high pressure bioscience and biotechnology HPBB Introduction

Recent Advances in Marine Biotechnology, Vol. 8 Milton Fingerman, R. Nagabhushanam, 2003 The book provides a comprehensive and up to date account of the information available on the morphological physiological and evolutionary aspects of specialized cells distributed within the epithelia of the airways in the vertebrates A lot of work has been done on the cell and molecular biology of these cells which are regarded as oxygen receptor neuroepithelial cells These chemoreceptors which were

conserved throughout evolution have neuroendocrine functions carrying their signals to the central nervous system The chemoreceptor cells are sensors which detect the signal changes in the external and internal environments and play a key role in the survival of various species Studies addressed to the chemoreceptor cell systems in the airways are of great importance for investigating their response to changes in the oxygen and carbon dioxide concentrations in the environment since the future of the planet earth is being threatened by global warming and climate change Geochemistry and the Origin of Life Satoru Nakashima,2001 **Proceedings of the ...
