X5 And Me:

The Magical Ceremony Maqlû Tzvi Abusch, 2015-10-05 The Akkadian series Maqlû remains the most important magical text against witchcraft from Mesopotamia and perhaps from the entire ancient Near East. Maqlû is a nine-tablet work consisting of the text of almost 100 incantations and accompanying rituals directed against witches and witchcraft. The work prescribes a single complex ceremony and stands at the end of a complex literary and ceremonial development. Thus Maqlû provides important information not only about the literary forms and cultural ideas of individual incantations but also about larger ritual structures and thematic relations of complex ceremonies. This new edition of the standard text contains a synoptic edition of all manuscripts, a composite text in transliteration, an annotated transcription, and translation. These were only minor remarks scribbled in the margins of an excellent and most welcome edition of Maqlû, a real monument. This book is the firm foundation on which future studies on Maqlû will be based. Marten Stol, NINO Leiden, Bibliotheca Orientalis lxxIII n 5 6, September-December 2016.

House X at Kommos Joseph W. Shaw, Maria C. Shaw, 2012-12-31 House X is by far the largest and best appointed of the Minoan houses excavated at Kommos in south central Crete, a Minoan harbor and settlement that later became the site of a Greek sanctuary. Situated on the seacoast of the western Mesara Plain, Kommos faces west toward the Libyan Sea. House X stands on the southern edge of the Minoan town, separated by a large slab-paved road from the monumental civic buildings built and used between the Protopalatial and Postpalatial periods. The description of the stratigraphic excavation of this elite house is published with numerous architectural plans along with the cataloged small finds and tables of data on the floral and faunal materials. The excavated fresco fragments are also discussed and illustrated.

¹³C NMR it is the correlation between spatial relationships of non hydrogen y substituents and their effect on chemical shift that can be used to assign stereochemistry It was also clear that the use of ¹³C NMR required a different approach to problem solving than that typically used with ¹H NMR While the latter technique could be employed with a very general approach e g the Karplus equation ¹³C NMR would at least for the immediate future require a relatively extensive set of model systems from which the consequences of stereochemical changes could be derived for any given carbon framework
