## Surface Second Harmonic G:

**Surface Second Harmonic Generation** Pierre-François Brevet, 1997-01-01 *Optics and Spectroscopy at Surfaces and Interfaces* Vladimir G. Bordo, Horst-Günter Rubahn, 2008-07-11 This book covers linear and nonlinear optics as well as optical spectroscopy at solid surfaces and at interfaces between a solid and a liquid or gas. The authors give a concise introduction to the physics of surfaces and interfaces. They discuss in detail physical properties of solid surfaces and of their interfaces to liquids and gases and provide the theoretical background for understanding various optical techniques. The major part of the book is dedicated to a broad review on optical techniques and topical applications such as infrared and optical spectroscopy or optical microscopy. Discussions of nonlinear optics but also nano optics and local spectroscopy complement this self contained work. Helpful features include about 50 problems with solutions, a glossary and a thoroughly elaborated list of topical references. The book is suited as a text for graduate students but also for scientists working in physics, chemistry, materials or life sciences who look for an expert introduction to surface optical aspects of their studies.

**Surface Second Harmonic Generation**, **Nonlinear Meta-Optics** Costantino De Angelis, Giuseppe Leo, Dragomir N. Neshev, 2020-05-20 This book addresses fabrication as well as characterization and modeling of semiconductor nanostructures in the optical regime with a focus on nonlinear effects. The visible range as well as near and far infrared spectral region will be considered with a view to different envisaged applications. The book covers the current key challenges of the research in the area including exploiting new material platforms fully extending the device operation into the nonlinear regime adding reconfigurability to the envisaged devices and proposing new modeling tools to help in conceiving new functionalities. Explores several topics in the field of semiconductor nonlinear nanophotonics including fabrication, characterization and modeling of semiconductor nanostructures in the optical regime with a focus on nonlinear effects. Describes the research challenges in the field of optical metasurfaces in the nonlinear regime. Reviews the use and achievements of all dielectric nanoantennas for strengthening the nonlinear optical response. Describes both theoretical and experimental aspects of photonic devices based on semiconductor optical nanoantennas and metasurfaces. Gathers contributions from several leading groups in this research field to provide a thorough and complete overview of the current state of the art in the field of semiconductor nonlinear nanophotonics. Costantino De Angelis has been full professor of electromagnetic fields at the University of Brescia since 1998. He is an OSA Fellow and has been responsible for several university research contracts in the last 20 years within Europe, the United States and Italy. His technical interests are in optical antennas and nanophotonics. He is the author of over 150 peer reviewed scientific journal articles. Giuseppe Leo has been a full professor in physics at Paris Diderot University since 2004 and in charge of the nonlinear devices group of MPQ Laboratory since 2006. His research areas include nonlinear optics, micro and nano photonics and optoelectronics with a focus on AlGaAs platform. He has coordinated several research programs and coauthored 100 peer reviewed journal articles. 200

conference papers 10 book chapters and also has four patents Dragomir Neshev is a professor in physics and the leader of the experimental photonics group in the Nonlinear Physics Centre at Australian National University ANU His activities span over several branches of optics including nonlinear periodic structures singular optics plasmonics and photonic metamaterials He has coauthored 200 publications in international peer reviewed scientific journals

**Fundamentals and Applications of Nonlinear Nanophotonics** Nicolae C. Panoiu, 2023-09-07 Fundamentals and Applications of Nonlinear Nanophotonics includes key concepts of nonlinear nanophotonics computational and modeling techniques to design these materials and the latest advances This book addresses the scientific literature on nanophotonics while most existing books focus almost exclusively on the linear aspects of light matter interaction at the nanoscale Sections cover nonlinear optics of sub wavelength photonic nanostructured materials review nonlinear optics of bound states in the continuum nonlinear optics of chiral plasmonic metasurfaces nonlinear hyperbolic nanomaterials nonlinear topological photonics plasmonic lattice solitons and more This book is suitable for academics and industry professionals working in the discipline of materials science engineering and nanotechnology Discusses advances in nonlinear optics research such as plasmonics topological photonics and emerging materials Reviews the latest computational methods to model and design nonlinear photonic materials Introduces key principles of advanced concepts in nonlinear optics of bound states in a continuum and symmetries in nonlinear nano optics
