**Peripheral Nerve Regeneration** Ana Colette Maurício, 2017-05-31 Peripheral nerve injuries are a high incidence clinical problem that greatly affects patients quality of life Despite continuous refinement of microsurgery techniques peripheral nerve repair still stands as one of the most challenging tasks in neurosurgery as functional neuromuscular recovery is rarely satisfactory in these patients Therefore the improvement of surgical techniques and the clinical application of innovative therapies have been intensively studied worldwide Direct nerve

repair with epineural end to end sutures is still the gold standard treatment for severe neurotmesis injuries but only in cases where well vascularized tension free coaptation can be achieved When peripheral nerve injury originates a significant gap between the nerve stumps nerve grafts are required with several associated disadvantages Therefore the development of scaffolds by tissue engineering can provide efficient treatment alternatives to stimulate optimum clinical outcome Nerve conduit tailoring involves reaching ideal wall pores using electrospinning techniques in their fabrication surface coating with extracellular matrix materials and adding of growth factors or cell based therapies among other possibilities Also intraluminal cues are employed such as the filling with hydrogels inner surface modification topographical design and the introduction of neurotrophic factors antibiotics anti inflammatories and other pharmacological agents A comprehensive state of the art of surgical techniques tissue engineered nerve graft scaffolds and their application in nerve regeneration the advances in peripheral nerve repair and future perspectives will be discussed including surgeons and researchers own large experience in this field of knowledge

*How to Improve the Results of Peripheral Nerve Surgery* Hanno Millesi, Robert Schmidhammer, 2007-12-31 All over the world research is going on to improve the outcome of the treatment of peripheral nerve lesions Questions over questions arise Is the autologous nerve grafting still the golden standard in bridging defects Have alternative techniques to overcome defects reached a level to replace autografting To which length are they effective What is the role of allografting Are there still indications for vascularized nerve grafts What can be expected from end to side coaptation Does it exist at all Under what conditions useful recoveries can be achieved Are there new developments in physical medicine and physiotherapy Can the quality of recovery be influenced by surgery on muscles to provide a better equilibrium of forces To what extent cerebral plasticity may be exploited to improve functional results The contributions in this book give answers to all of these questions

Krayenbühl,J. Brihaye,F. Loew,V. Logue,S. Mingrino,B. Pertuiset,L. Symon,H. Troupp,M. G. Ya?argil,2012-12-06 There are two important reasons for commencing this new series of publications entitled Advances and Technical Standards in Neurosurgery 1 the lack of any organized common European postgraduate training system for young neurosurgeons and 2 the language barriers which impede the exchange of neuro surgical findings in Europe more than in other parts of the world The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding Therefore the Editors have decided to publish all contributions in English regardless of the native language of the authors All contributions are submitted to the entire editorial board before publication of any volume Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made The contributions will be written by specialists in the given fields and will constitute the first part of each volume **The Surgery of the Peripheral Nerve Injuries of Warfare** Sir Harry Platt,1921
