X Ray Binaries:

X-ray Binaries Walter H. G. Lewin, Walter H. Lewin, Edward P. J. van den Heuvel, Jan van Paradijs, 1997-01-16 X ray binaries are some of the most varied and perplexing systems known to astronomers The compact object which accretes mass from its companion star may be a white dwarf neutron star or black hole whereas the donor star can be a normal star or a white dwarf The various combinations differ widely in their behaviour and this timely volume provides a unique reference of our knowledge to date of all of them Fifteen specially written chapters by a team of the world's foremost researchers in the field explore all aspects of the X ray binaries They cover the X ray ultraviolet optical and radio properties of these violent systems and address key issues such as how were these systems formed and what will be their fate how can we understand X ray bursts and how the quasi periodic oscillations what is the connection between millisecond radio pulsars and low mass X ray binaries and how does the magnetic field of a neutron star decay This long awaited review provides graduate students and researchers with the standard reference on X ray binaries for many years to come

A Population Explosion Reba Bandyopadhyay, Stefanie Wachter, Dawn Gelino, Christopher Gelino, 2008-06-04 Technological advances in X ray astronomy have recently led to the discovery of a large number of previously undetected accreting binaries increasing by an order of magnitude their known population in the Galaxy This meeting addressed the current state of observational and theoretical research into the X ray binary population as a whole including both well studied systems and the newly discovered populations and examined the interaction of X ray binaries with their environment within our own Galaxy and in external galaxies
