JSTL Sue Spielman, 2003-10-01 Web developers and page authors who use JavaServer Pages JSP know that it is much easier and efficient to implement web pages without reinventing the wheel each time In order to shave valuable time from their development schedules those who work with JSP have created debugged and used custom tags a set of programmable actions that provide dynamic behavior to static pages paving the way towards a more common standard approach to using Java technology for web development The biggest boost to this effort however has only recently arrived in the form of a standard set of tag libraries known as the JSTL which now provides a wide range of functionality and gives web page authors a much more simplified approach to implementing dynamic Java based web sites JSTL Practical Guide for JSP Programmers is a timely resource for anyone interested in doing large scale J2EE application development It sticks to the main features of the JSTL so that developers don't have to sift through unnecessary details to begin using the tags and working with the expression language Sue Spielman's straight forward practical approach is enhanced with numerous code samples and insightful descriptions to make learning the JSTL a quickly and easily accomplished task Written by a best selling author with a wealth of development experience and recognition in the Java community Covers the core elements of the JSTL including the four standard tag libraries core internationalization format XML and SQL and expression language Includes a reference section for all of the tags and attributes contained in the JSTL

Pro J2EE 1.4: From Professional to Expert Sue Spielman, Meeraj Kunnumpurath, 2004-06-28 This chapter has covered a lot of ground After reading it you should have a thorough understanding of the new features available in the JSP 2.0 specification We covered what you need to know to write your own custom actions regardless of which implementation you choose Custom actions are useful for creating reusable JSP components New in the JSP 2.0 specification are the notions of tag files and JSP fragments These are simple ways to create custom actions without having to know how to write Java They provide a

mechanism for page authors to create their own custom tag libraries without the worry of having to write complicated Java code Using tag files provides a mechanism for eliminating writing TLD files since the JSP container generates implicit TLD files for them There is also a flexible mechanism in place for packaging and deploying tag libraries in JSP 2.0 It is also possible to write classic actions using the various interfaces available These include the following Tag BodyTag IterationTag Another feature introduced in this chapter was the new JSP 2.0 Simple Tag interface which has a much simpler life cycle defined than the classic tag interfaces Simple Tag allows for all of the power of cooperating and iteration tags with less hassle in the coding Other new features include using dynamic attributes in actions that allow tag handlers to accept attributes that haven't been declared in a TLD
