Product Name: Acme CRM
Version: 1.0.0
Phase: Beta (experimental)
Date: 09 May 2023

Product Overview 📄

Acme CRM is a customer relationship management software designed to help businesses manage their customer interactions and improve their sales and marketing efforts. It is built using Java and runs on Windows, Linux, and macOS.

Product Objectives 📄

Acme CRM aims to provide a user-friendly interface, real-time analytics, personalized communication, streamlined workflows, scalability, data security and compliance, integrations, customizable dashboards and reports, mobile access, and excellent support with continuous updates to meet evolving business needs.

Product Features 📄

Automatic Deal Scoring

Acme CRM includes an automatic deal scoring feature that assigns a score to each deal based on its likelihood of closing. The score is calculated based on factors such as the deal value, the stage of the deal, and the level of engagement from the customer. The feature enables sales reps to prioritize their efforts and focus on the deals with the highest likelihood of closing.

Best Practices - Planning and Structuring Helpful User Assistance Marc Ahtelig, 2020-10-25 Even the best information is worthless if users can't find it Providing user friendly structure and navigation is just as important as providing well written content However structuring user assistance isn't as simple and obvious as it may seem If you think that your document structure should follow the structure of your product's components and functions You're wrong If you think that the type of document that you prefer is the same type of document that your clients prefer You're wrong If you think that all the information that you have is important You're also wrong This book tells you how to structure index and link your documents so that readers actually find the information they need Topics covered General structuring principles that all

structural decisions have in common Choosing media Should you provide a printed or printable user manual PDF online help or both What information should go into the user manual and what information should go into online help Which help format should you use Can context sensitive help calls be implemented Should you provide interactive features Planning documents Should you put all information into one document or should you supply several user manuals for specific purposes and user groups How should you name your documents Planning document sections What are the major sections that your documents should consist of Are there any standard sections that you mustn't forget Planning topics What types of information do your clients need How should you build and name the individual topics within the document Planning the order of sections and topics How should you organize the sections and topics within your documents What comes first What comes later Planning navigation Which navigational devices should you provide in printed documents and in online help systems Where should you provide links or cross references and where not

Integrated Management of Technical Documentation Jirka Hoppe, 2012-12-06 Writing documentation is an integral part of any technical product development A significant amount of time is spent describing the product functionality giving insights into technical details providing maintenance instructions specifying marketing information writing user manuals etc As the creation of such documentation is generally a source of higher production costs many large companies are realising the need to increase the efficiency of documentation handling Simple documents consisting of only a few pages can be developed on simple systems Basic components of such systems are an editor handling text and graphics file storage and a printer Such configurations however are not sufficient to handle professional documentation as produced by larger companies Detailed studies of technical documentation requirements have revealed that in particular the following functionality is not usually provided by such simple documentation systems Technical documentation is often very large documents having hundreds or even thousands of pages are not exceptional Due to size and complexity technical documentation is developed most often by a team of authors A system for technical documentation has to provide functionality supporting the organisation of a group of authors Technical documentation usually consists of many different documents combined into one large documentation for a particular product The optimum organisation of the storage and retrieval of documents is crucial for the performance and acceptability of the system The functionality offered by normal file systems is not adequate to organise complex systems
