Microsoft Word – Part 1

by Ms. Aiza Syahida binti Hj. Zakaria

4.0 Introduction

The most common computer application is a word processing. It is to create, edit and print documents using a computer. To perform word processing, we need a computer, a special program called a word processor, and a printer. A word processor enables us to create a document, store it electronically on a disk, display it on a screen, modify it by entering commands and characters from the keyboard, and print it on a printer.

The great advantage of word processing over using a typewriter is that we can make changes without retyping the entire document. If we make a typing mistake, we simply remove it, without leaving a trace. It is equally easy to insert a word, sentence, or paragraph in the middle of a document. Word processors also make it easy to move sections of the text from one place to another within a document, or between documents. When we have made all the changes we want, we can send the file to a printer to get a hardcopy.

The most popular word processing software is Microsoft Word. Other software includes WordStar from Star Office and Lotus Word Pro from the Lotus Suite.

The Word Processing Explosion Gilbert J. Konkel, Phyllis J. Peck, 1976 *Here Be Dragons* Olle Häggström, 2016-01-21

There is a widely held conception that progress in science and technology is our salvation and the more of it the better. This however is an oversimplified and even dangerous attitude. While the future will certainly offer huge changes due to such progress, it is far from certain that all of these changes will be for the better. The unprecedented rate of technological development that the 20th century witnessed has made our lives today vastly different from those in 1900. No slowdown is in sight and the 21st century will most likely see even more revolutionary changes than the 20th due to advances in science, technology, and medicine. Particular areas where extraordinary and perhaps disruptive advances can be expected include biotechnology, nanotechnology, and machine intelligence. We may also look forward to various ways to enhance human cognitive and other abilities using e.g. pharmaceuticals, genetic engineering, or machine brain interfaces, perhaps to the extent of changing human nature beyond what we currently think of as human and into a posthuman era. The potential benefits of all these technologies are enormous, but so are the risks, including the possibility of human extinction. This book is a passionate plea for doing our best to map the territories ahead of us and for acting with foresight so as to maximize our chances of reaping the benefits of the new technologies while avoiding the dangers.

Dust Explosions in the Process Industries Rolf K. Eckhoff, 2003-07-18. Unfortunately, dust explosions are common and costly in a wide array of industries such as petrochemical, food, paper, and pharmaceutical. It is imperative that practical and theoretical knowledge of the origin, development, prevention, and mitigation of dust explosions is imparted to the responsible safety manager. The material in this book offers an up-to-date evaluation of prevalent activities, testing methods, design measures, and safe operating techniques. Also provided is a detailed and comprehensive critique of all the significant phases relating to the hazard and control of a dust explosion. An invaluable reference work for industry safety consultants and students. A completely new chapter on design of electrical equipment to be used in areas containing combustible, explosible dust. A substantially extended and reorganized final review chapter containing nearly 400 new literature references from the years 1997-2002. Extensive cross-referencing from the original chapters 1-7 to the corresponding sections of the expanded review chapter.
