With Nails Richard E. Grant, 1999-03-01 The star of the cult classic *Withnail and I* offers a refreshing combination of comedy confession and coruscation in this memoir of the movie business Kirkus Reviews Richard E Grant's acting career has included memorable roles in some of Hollywood's most critically acclaimed films including Robert Altman's *Gosford Park* and Francis Ford Coppola's *Dracula* But he attributes his success to his first film role starring as a flamboyantly pathetic Shakespearean in the underground hit *Withnail and I* As Grant explains I had no notion that almost without exception every film offered since would be the result of playing an alcoholic out of work actor In *With Nails* Grant shares his long maddening and immensely rewarding journey through the world of film From the hell of making *Hudson Hawk* to befriending Steve Martin on the set of *L A Story* and from eating spaghetti with the Coppolas to window shopping with Sharon Stone and working with and learning from the best actors and directors in the business Grant's unvarnished memoir is a biting and wonderfully funny look at the movie business by an actor who is as clear eyed and observant about himself as he is about the craziness surrounding him Publishers Weekly starred review [Specifications in Detail](#) Frank W. Macey, 2015-10-06 Sir Roger Pratt's *Rules for the Guidance of Architects* written on 7 December 1665 included the following statements which embody succinctly the principles of the specification of building works and indeed of contract administration and are as true today as they were nearly 350 years ago To determine anything without due premeditation is rashness Not to come to any determination in a convenient time is an effect either of ignorance or sloth To wittingly omit to do that at the first which at last we shall be forced to at our greater disadvantage is the extremity of folly To be so forward in premeditation as to make no trade at a stand for want of direction which will cause great repining etc and to be careful to see them exactly performed for otherwise all trades will be at catch with him To contrive all things with the most orderly thrift and longest duration However Pratt seems to have relied on entrusting the works to known competent workmen rather than incorporating these wise principles in a written specification This method of working appears to have continued until the rise of the general contractor in the nineteenth century when a written specification became an essential part of the design process The specification was needed to describe the materials to be used and ways of working them and to ensure comparability of tenders particularly for public works This encouraged books on specifications starting with Alfred Bartholomew's *Specifications for Practical Architecture* in 1840 revised in 1846 It began with a long essay on the decline of excellence in the structure and in the science of modern English buildings with the proposal of remedies for those defects This was followed by 54 specifications for various types and classes of buildings notes on various materials and an alphabetical digest of the London Building Act with a comprehensive index a multi purpose book like many of its successors Noting that Bartholomew was no longer in print T L Donaldson was prompted to produce his *Handbook of Specifications* in 1859 in which after setting out the principles of specification writing he reproduced 46 specifications for actual buildings and other works by his

illustrious contemporaries This included the Houses of Parliament by Sir Charles Barry and Newcastle High Level Bridge by Robert Stephenson and was followed by 136 pages on the law as applied to building matters This is a fascinating book invaluable to construction historians but will have been of less use to authors of specifications than a sequential list of trade based clauses Bartholomew s book was revised again twice by Frederick Rogers in 1886 and 1893 but still with a similar essay followed by specifications for various types of building but now only 27 rather than trade based clauses for which we had to wait for the first edition of Macey in 1898 Frank W Macey s predecessors had a tendency to set out what should be covered in specifications and the ills of poor specification together with a quantity of information about the use of various materials and construction methods This was admittedly useful but better covered in the books on building construction that had started to appear at about the same date such as Mitchell and Rivingtons published in facsimile by Donhead in 2004 Macey by contrast dived almost straight in to trade based clauses in a logical order The specification author in an architect s office must have heaved a sigh of relief when Macey landed on his desk because here was a book that provided just what he needed to cut and paste in the order he needed it and with marginal sketches showing how the materials and details were applied Similarly students of architecture had a useful source of reference for the work by the various trades instead of having to look at the trade in each specification when referring to earlier books to decide which example to follow Contemporary reviews of Macey criticized the book for being out of date as he failed to cover all the latest developments in materials In hindsight that attitude appears less than fair because any architect incorporating recently introduced materials such as reinforced concrete or metal lathing would make sure he was fully conversant with them and their use and would be able to describe them adequately as a matter of common prudence No book would be able to keep up to date with the rapidly developing variety of materials appearing almost daily at the dawn of the Edwardian era That was more than adequately addressed by the annual initially quarterly Specification published by the Architectural Press which started the same year that the first edition of Macey was published and continued to keep construction professionals informed every year until 1992 Frank Macey revised and enlarged the text in 1904 for the second edition having published his companion volume on Conditions of Contract in 1902 and taking account of criticisms in The Builder s review of his first edition It is his second edition that this introduction accompanies having been chosen by Donhead to give us an exhaustive reference to the materials and construction in use at the end of the Victorian era and the dawn of the twentieth century It will also help us today when drafting specifications for work on buildings that have just passed their centenary Frank William Macey 1863 1935 practised as an architect in the City of London before emigrating to Canada He was the first resident architect in Burnaby in British Columbia where he settled in the first decade of the twentieth century and obtained a number of commissions from prominent businessmen who were building grand homes in the new community of Deer Lake He designed predominantly in the British Arts and Crafts style and introduced the use of rough cast stucco for building exteriors a

characteristic for which he was renowned He also designed three churches two of which are still standing Macey s Specifications in Detail survived his departure to Canada The third edition co authored by J P Allen PASI was published in 1922 and the fourth edition revised by Donald Brooke MA BArch ARIBA MStructE a Lecturer in Architecture at the University of Liverpool and J W Summerfield FASIMRSanI a quantity surveyor was published in 1930 with a second impression in 1937 The fifth edition revised by the then late Donald Brooke and Stanley Wilkinson BArch ARIBA a Senior Lecturer in Architectural Construction at the University of Liverpool was published in 1955 and takes specification writing through to the introduction of the National Building Specification in 1973 continuing where Macey had started with trade based clauses in a logical order A contemporary reviewer of the first edition praised so much that is excellent in the book and so many things explained of which the young architect would have much difficulty in finding a description in other books The fact that Macey gave a great amount of practical information as to the details of construction on points which are not usually to be met with in text books means that this facsimile should find a place on the bookshelves of construction professionals from all disciplines today alongside Donhead s other facsimiles as a well indexed guide to what they can expect to find when working on late Victorian and Edwardian buildings Students of conservation practice may like to note this comment from the same contemporary reviewer It may therefore be looked upon as a guide to the young architect in practical matters quite as much as a model for specification writing It indeed attempts to furnish the novice with the knowledge that he ought to possess before sitting down to write a specification If Macey s book was valued a hundred years ago for these reasons there is all the more reason today to use it as a reliable reference to what will be found in buildings that have celebrated their centenary Lawrance Hurst August 2009
