Types In Logic Programming:

Types in Logic Programming Frank Pfenning,1992 This collection of original research papers assesses and summarizes the impact of types on logic programming Type theory is a well established branch of theoretical computer science that has played an important role in the development of imperative and functional programming languages This collection of original research papers assesses and summarizes the impact of types on logic programming It covers all of the major themes in this burgeoning field including simple types regular tree types polymorphic types subtypes and dependent types Language design issues as well as semantics pragmatics and applications of types are discussed The benefits that type considerations have to offer logic programming are being increasingly realized through type checking many errors can be caught before a program is run resulting in more reliable programs types form an expressive basis for module systems since they prescribe a machine verifiable interface for the code encapsulated within a module and types may be used to improve performance of code generated by a compiler The research in this collection describes these benefits as well as important differences in the impact of types in functional and logic programming

Balbin,K. Lecot,2012-12-06 Logic Programming was effectively defined as a discipline in the early seventies It is only during the early to mid eighties that books conferences and journals devoted entirely to Logic Programming began to appear Consequently much of the work done during this first crucial decade in Marseilles Edinburgh London Budapest and Stockholm to name a few is often overlooked or difficult to trace There are now two main regular conferences on Logic Programming and at least five journals The Journal of Logic Programming New Generation Computing Automated Reasoning The Journal of Symbolic Computation and Future Generation Computer Systems Logic Programming however has its roots in Automated Theorem Proving and via the expanding area of expert systems strongly influences researchers in such varied fields as Civil Engineering Chemistry Law etc Consequently many papers related to Logic Programming appear in a wide variety of journals and proceedings of conferences in other disciplines This is particularly true of Computer Science where a revolution is taking place in hardware design programming languages and more recently databases One cannot overestimate the importance of such a bibliography **Principles and Practice of Declarative Programming** ,2006
