# SQL JOIN USING clause with SELECT *

On the other hand, if we run a SELECT * query that features the USING clause:

```
1   SELECT *
2   FROM post
3   INNER JOIN post_comment USING(post_id)
4   ORDER BY post_id, post_comment_id
```

We are going to get the following result set:

```
| post_id | title     | post_comment_id | review    |
|---------|-----------|-----------------|-----------|
| 1       | Java      | 1               | Good      |
| 1       | Java      | 2               | Excellent |
| 2       | Hibernate | 3               | Awesome   |
```

We can see that the post_id column is deduplicated, so there is a single post_id column being included in the result set.
