renewables e.g. geothermal or biomass for thermal energy production. Specific solutions including case studies of systems implemented on buildings all over the world are presented and analyzed for electrical and for thermal energy production and the main differences in the systems design are outlined. The conversion efficiency, thus the output and the main causes of energy losses are considered in both cases. The architectural constraints are additionally considered and novel solar energy converters with different shapes and colors are presented and discussed. The durability of the solar energy conversion systems is analyzed considering the specific issues that occur when these systems are implemented in the built environment based on practical examples. General conclusions are formulated and specific aspects are discussed in relation to experimental results and literature data. With renewables implemented in the built environment likely to expand in the near future, this book represents welcome and timely material for all professionals and researchers that are aiming to provide efficient and feasible solutions for the sustainable built environment.
