Solid Software:

Software Quality - ECSQ 2002 Jyrki Kontio, Reidar Conradi, 2003-08-01 Software professionals and companies live in a new world today. Increasingly complex systems need to be built faster and cheaper. While many of the established approaches in software quality are still valid, the software quality community is going through a paradigm shift that requires a re-assessment of our current method and tool portfolio as well as creating new and more effective solutions. We have selected two themes for this conference to highlight this paradigm shift. Our first theme: production of attractive and reliable software at Internet speed sums up the dilemma many software organisations face. In order to be competitive, software should contain advanced features and run reliably, yet it should be developed quickly and cost effectively for the right market window. Finding the right balance between these objectives is a critical question that will determine business success in the years to come. Our second theme: production of software with a dynamic partnership network highlights the current trend of using partnerships and subcontractors as integral players in the software development process. Partnerships sometimes need to be created quickly to respond to a market opportunity, yet the costs and speed of cooperation must be competitive. Different companies have different processes, quality tools, and cultures, yet they should cooperate seamlessly for the best result.

Handbook of Research on Software for Gifted and Talented School Activities in K-12 Classrooms Ikuta, Shigeru, 2019-12-27 As technology continues to play a pivotal role in society, education is a field that has become heavily influenced by these advancements. New learning methods are rapidly emerging and being implemented into classrooms across the world, using software that is low cost and easy to handle. These tools are crucial in creating skillful learning techniques in classrooms, yet there is a lack of information and research on the subject. The *Handbook of Research on Software for Gifted and Talented School Activities in K-12 Classrooms* is an essential reference source that discusses newly developed but easy to handle and less costly software and tools and their implementation in real 21st century classrooms worldwide. The book also helps and supports teachers to conduct gifted and talented school activities in K-12 classrooms. Featuring research on topics such as educational philosophy and skillful learning techniques, this book is ideally designed for software developers, educators, researchers, psychologists, instructional designers, curriculum developers, principals, academicians, and students seeking coverage on the emerging role that newly developed software plays in early education.

Finite Element Analysis for Civil Engineering with DIANA Software Shun Chai, 2020-05-27 This book systematically introduces readers to the finite element analysis software DIANA (Displacement ANalyzer) and its applications in civil engineering. Developed by TNO Corporation in the 1970s, DIANA is frequently used in civil engineering and engineering mechanics. Unlike the software user's manual, which provides a comprehensive introduction and theoretical analysis, this book presents a simplified overview of the basic background theory to help beginners master the software quickly. It also discusses GUI operation and the command console in Python language and includes examples involving classical modeling operations.

to help readers review each section Both the book and DIANA itself are valuable resources for students and researchers in all the structural engineering fields such as civil engineering bridge engineering geotechnical engineering tunnel engineering underground structural engineering irrigation municipal engineering and fire engineering **InfoWorld** ,1983-02-21 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects *InfoWorld* ,1983-07-18 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects InfoWorld ,1983-03-21 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects *Green Software Defined Radios* Liesbet Van der Perre,Jan Craninckx,Antoine Dejonghe,2008-12-21 Green Software Defined Radios the title of this book may have originated from a lack of inspiration and the combination of hard work jetlag and drinking green tea The message we want to convey however is that SDRs are a promising technology for the future providing they are designed for efficient usage of scarce resources energy and spectrum In the last years the R D teams focusing on wireless communication around the world and at IMEC specifically have realized great breakthroughs It is our honor building on this knowledge to bring a comprehensive overview of the essential technologies We are grateful that Springer is willing to publish in their collection on radio technologies a book on green SDRs a weird species still today yet maybe the baseline for the day after tomorrow Dear reader we wish that you find in the following pages including the references some interesting insights and that this book may live more or less up to your expectations and hopefully more than less This book is closing state that the quest for Green SDR has not ended this is just the beginning Concerning this book however we are happy that today the opposite is true We want to acknowledge our colleagues at IMEC for their great scientific contribution and even more for the enjoyable cooperation **Publications of the National Institute of Standards and Technology ...
