The 5 Elements of Effective Thinking, by Edward B. Burger and Michael Starbird,
Princeton University Press, 2012.

Homework Exercises:

Homework will be due regularly, usually each Wednesday. Work will be submitted via Canvas. Clarity of exposition is extremely important. Thus, you should strive for well-written, polished answers. Collaboration on these assignments with others from *this class* is encouraged after you have worked on all the questions on your own. Submitted work must be individually written up and all collaborators should be acknowledged.

Workshop Sessions:

Once every two weeks you will meet with Hannah with a small group of about five students to discuss the mathematics. You will sign up for these sessions during the first couple weeks of class. Sessions will be held for 30 minutes each. Your performance in the workshop sessions will be partially measured by your presentation and discussion of selected homework challenges with your peers and Hannah.

Examinations:

Two mid-term tests will be given, one on February 15 and the other in early April. The date of the April test will be announced at least a week before the test. There will be a comprehensive final examination on Thursday, May 16, 9:00 a.m.-12:00 p.m..

Stories of Creation/Math as Metaphor:

On several occasions during the semester, you will be asked to take a mathematical concept and create a story illustrating how that idea could have been conceived and developed. As a final project, choose an issue that you care about outside mathematics. Then produce a similar story that illustrates how you created a new insight or product in that other field by using the elements of effective thinking that we discuss during the semester. These projects will be described more fully during the semester.

Silver, Jeremy Kilpatrick, Beth Schlesinger, Dennie Wolf, 1990 This document focuses on how mathematics teaching and learning can be improved by developing more powerful approaches to connect thinking and mathematics It proposes changing perspectives on what it means to learn and do mathematics and explores how these perspectives can be incorporated into the teaching of secondary school mathematics Chapter 1 offers a view of mathematics as emerging largely from individual and social activity rather than from textbooks worksheets and tradition The learner is depicted as someone who actively constructs meaning instead of passively receiving it Chapter 2 considers how a greater emphasis on communication discussion debate recording and writing stimulates and uncovers students learning and thinking and leads to a deeper understanding by both teachers and students Chapter 3 explores how teachers might encourage greater inquiry and communication in a secondary school class by making minor but thought provoking changes in ordinary problems and situations Finally chapter 4 gives some practical advice on transforming the mathematics classroom into a place where students are expected not only to absorb and consume mathematics but also to produce and think about it Contains 17 references and 17 figures MKR
