Photogrammetric Computer Vision Wolfgang Förstner, Bernhard P. Wrobel, 2016-10-04 This textbook offers a statistical view on the geometry of multiple view analysis required for camera calibration and orientation and for geometric scene reconstruction based on geometric image features The authors have backgrounds in geodesy and also long experience with development and research in computer vision and this is the first book to present a joint approach from the converging fields of photogrammetry and computer vision Part I of the book provides an introduction to estimation theory covering aspects such as Bayesian estimation variance components and sequential estimation with a focus on the statistically sound diagnostics of estimation results essential in vision metrology Part II provides tools for 2D and 3D geometric reasoning using projective geometry This includes oriented projective geometry and tools for statistically optimal estimation and test of geometric entities and transformations and their relations tools that are useful also in the context of uncertain reasoning in point clouds Part III is devoted to modelling the geometry of single and multiple cameras addressing calibration and orientation including statistical evaluation and reconstruction of corresponding scene features and surfaces based on geometric image features The authors provide algorithms for various geometric computation problems in vision metrology together with mathematical justifications and statistical analysis thus enabling thorough evaluations The chapters are self contained with numerous figures and exercises and they are supported by an appendix that explains the basic mathematical notation and a detailed index The book
