Kerri,2000-02 **Improving Efficiency and Reliability in Water Distribution Systems** Enrique Cabrera,Antonio F. Vela,2013-03-14 This book contains the lectures given in the International Course Improving efficiency and reliability in water supply systems hosted and sponsored by the Menendez Pelayo International University U I M P and co sponsored by Aguas de Valencia the British Council and the EC Cornett and Erasmus programmes The short course took place in Valencia Spain in November 1994 with an attendance of more than one hundred delegates We must not only acknowledge and thank Dr Joaquin Azagra as UIMP Director but also his collaborators D

Luis Moreno and Lidia Lopez for their support in the preparation of the Course and during the course taking place UIMP sponsorship allowed us to assemble in Valencia an eminent cadre of lecturers coming from all over the world that covered in an ordered and precise fashion some of the more relevant aspects on efficiency and reliability in water supply systems We are very thankful to all these leading lecturers for their invaluable cooperation The publication of this book and the Spanish edition as well have been made possible thanks to the sponsorship of both Polytechnic University of Valencia through its Chancellor Justo Nieto and Aguas de Valencia throughout its General Director Alvaro Aguirre We must also thank Kluwer Academic Publishers and especially their Publisher Petra van Steenberg for her assistance careful presentation and production of the book

**Public Water Supply Distribution Systems** National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Public Water Supply Distribution Systems: Assessing and Reducing Risks, 2005-05-12 The Water Science and Technology Board has released the first report of the Committee on Public Water Supply Distribution Systems Assessing and Reducing Risks which is studying water quality issues associated with public water supply distribution systems and their potential risks to consumers The distribution system which is a critical component of every drinking water utility constitutes a significant management challenge from both an operational and public health standpoint This first report was requested by the EPA as the agency considers revisions to the Total Coliform Rule with potential new requirements for ensuring the integrity of the distribution system This first report identifies trends relevant to the deterioration of drinking water quality in distribution systems and prioritizes issues of greatest concern according to high medium and low priority categories Of the issues presented in nine EPA white papers that were reviewed by the committee cross connections and backflow new or repaired water mains and finished water storage facilities were judged by the committee to be of the highest importance based on their associated potential health risks In addition the report noted that two other issues should also be accorded high priority premise plumbing and distribution system operator training This first report will be followed in about 18 months by a more comprehensive final report that evaluates approaches for risk characterization and identifies strategies that could be considered to reduce the risks posed by water quality deteriorating events
