

A close-up photograph of a construction worker on a roof. The worker is wearing dark, heavy-duty work pants and black rubber boots. They are using a long-handled tool, possibly a trowel or a roller, to apply a dark, viscous material to the roof surface. A roll of the same material lies on the roof nearby. The background shows a blurred view of other buildings and a clear sky.

## **Waterproofing The Building Envelope:**

*Waterproofing the Building Envelope* Michael T. Kubal, 1993 Leakage problems in construction are the number one cause of lawsuits That s why you need Kubals new Waterproofing the Building Envelope the first book designed to cover every facet of waterproofing from below grade to above grade and back down again It s the only book that explains the critical 90% 1% principle why 90% of all building leakage is attributable to 1% of a building s area and what you can do about it It shows you how to select the right materials and systems for a particular project including sealants expansion joints and admixtures and put them all together so that they function as a waterproof envelope Included are tips on testing cleaning maintenance and repair plus coverage of safety and environmental standards

*The Ecologies of the Building Envelope* Alejandro Zaera-Polo, Jeffrey Anderson, 2021-05-11 The Ecologies of the Envelope theorizes the building envelope as a literal embodiment of the social political technological and economic contingencies which have become embedded within it over the last century analyzing the historical lineages heroes and villains that helped define the complex material ecologies we see within the envelope today While the fa ade is one of the most thoroughly theorized elements of architecture it is also one of the most questioned since the end of the 19th century Within the discipline of architecture the traditional understanding of the fa ade focuses primarily on semiotic and compositional operations such as proportional laws and linguistic codes which are deployed on the building s surface In contrast to this our material and environmental theory of the envelope proposes that the exponential development of building technologies since the mid 19th century coupled with new techniques of management and regulation have diminished the compositional and ornamental capacities of the envelope in favor of material quantitative and technical performances Rather than producing a stylistic analysis of the fa ade we investigate the historical lineages of the performances components assembly types and material entanglements that constitute the contemporary building envelope

**Durability and Waterproofing Investigations of the Building Envelope** Beth Anne Feero, 2015 abstrDurability of the building envelope is an important characteristic to monitor and test on a structure to ensure it does not fail prematurely from water penetration Due to the building envelop failures existing today the described testing herein aims to evaluate different building components in an effort to express deficiencies in testing or products so as to better influence the building envelope product market and lessen the possibility of future failures This thesis describes the background and protocol for testing water resistive barrier full scale mockups for long term durability An auxiliary study of the product nail sealability testing was also conducted providing supporting visibility into inconsistencies between manufacturer and test results Elastomeric sealants were also tested according to a new standard ASTM C1589 which evaluates products for the long term based on both movement and weathering a much needed standardized testing scenario Initial results show the need for primed silicone and SWR Institute validated products The water penetration characteristics of concrete masonry units were also analyzed using both ASTM C90 and RILEM tube testing The results emphasized the

need for redundancy in water repellents for porous units and the significant leniency of ASTM C90. Lastly, masonry veneer anchor guidelines were discussed and it was found that the prescriptive nature of the MSJC code does not provide adequate guidance on installation of anchors for unique architectural or structural details. Suggestions for placement in these instances are given. Much of the testing described in this thesis represents best practice suggestions and initial product evaluation. Since this testing has been developed as long-term experiments, the next few years will provide the needed information on failure mechanisms and methods to prevent these failures.
