**XSLT 2.0 and XPath 2.0 Programmer's Reference** Michael Kay,2011-01-06 Combining coverage of both XSLT 2 0 and XPath 2 0 this book is the definitive reference to the final recommendation status versions of both specifications The authors start by covering the concepts in XSLT and XPath and then delve into elements operators expressions with syntax usage and examples Some of the specific topics covered include XSLT processing model stylesheet structure serialization extensibility and many others In addition to online content that includes error codes the book also has case studies you ll find applicable to your own challenges

*XSLT 2.0 Programmer's Reference* Michael Kay,2004-08-20 The book is the authoritative reference guide to the language Without using the formal and inaccessible language of the W3C specifications it tells the reader exactly what every construct in the language does and how it is intended to be used It is a reference rather than a tutorial it is designed for the professional programmer who is using the language every day It is the book that people quote when they claim that a particular product is giving the wrong answer and the book that implementers of the language turn to when they want clarification of the specifications At the same time the book is readable Reviews of the previous editions show that readers appreciate the background material on the design thinking behind the language the essay on functional programming the occasional dry wit the gentle criticism of the language specification when appropriate and the fact that the examples stray into a diverse range of interesting application areas

*Reasoning Web* Norbert Eisinger,Jan Maluszynski,2005-07-19 This volume contains the tutorial papers of the Summer School Reasoning Web July25 29 2005 <http://reasoningweb.org> TheSchoolwashostedbythe University of Malta and was organized by the Network of Excellence REVERSE Reasoning on the Web with Rules and Semantics <http://reverse.net> funded by the EU Commission and by the Swiss Federal Office for Education and Science within the 6th Framework Programme under the project reference number 506779 The objective of the school was to provide an introduction into methods and issues of the Semantic Web a major endeavor in current Web research where the World Wide Web Consortium W3C plays an important role The main idea of the Semantic Web is to enrich Web data with meta data carrying a meaning of the data and allowing Web based systems to reason about data and meta data The meta data used in Semantic Web applications is usually linked to a conceptualization of the application domain shared by different applications Such a conceptualization is called an ontology and specifies classes of objects and relations between them Ontologies are defined by ontology languages based on logic and supporting formal reasoning Just as the current Web is inherently heterogeneous in data formats and data semantics the Semantic Web will be inherently heterogeneous in its reasoning forms indeed any single form of reasoning turns out to be insufficient in the Semantic Web
