A typical characterization of EuroSPI is reflected in a statement made by a company the biggest value of EuroSPI lies in its function as a European knowledge and experience exchange mechanism for SPI and innovation Since its beginning in 1994 in Dublin the EuroSPI initiative has outlined that there is not a single silver bullet to solve SPI issues but that you need to understand a combination of different SPI methods and approaches to achieve concrete benefits The fore each proceedings volume covers a variety of different topics and at the conference we discuss potential synergies and the combined use of such methods and approaches These proceedings contain selected research papers for five topics Section I SPI Tools Section II SPI Methods Section III SPI in SMEs Section IV Economic Aspects of SPI Section V The Future of SPI Section I presents studies on SPI tools The authors provide an insight into new tools which can be used for SPI Willem Bekkers et al present a new assessment method and tool for software product management Ismael Edrei Espinosa Curiel et al illustrate a graphical approach to support the teaching of SPI Paul Clarke and coworkers deal with an analysis and a tool to help real adoption of standards like ISO 12207 and they focus on SPI implementation and practices Esparanca Amengual et al present a new team based assessment method and tool Software Engineering, The Development Process Richard H. Thayer, Mark J. Christensen, 2005-11-11 Volume 1 of Software Engineering Third Edition includes reprinted and newly authored papers that describe the technical processes of software development and the associated business and societal context Together with Volume 2 which describes the key processes that support development the two volumes address the key issues and tasks facing the software engineer today The two volumes provide a self teaching guide and tutorial for software engineers who desire to qualify themselves as Certified Software Development Professionals CSDP as described at the IEEE Computer Society Web site www.computer.org/certification while also gaining a fuller understanding of standards based software development Both volumes consist of original papers written expressly for the two volumes as well as authoritative papers from the IEEE archival journals along with papers from other highly regarded sources The papers and introductions of each chapter provide an orientation to the key concepts and activities described in the new 2004 version as well as the older 2001 version of the Software Engineering Body of Knowledge SWEBOK with many of the key papers having been written by the authors of the corresponding chapters of the SWEBOK Software Engineering is further anchored in the concepts of IEEE EIA 12207 0 1997 Standard for Information Technology Software Life Cycle Processes which provides a framework for all primary and supporting processes activities and tasks associated with software development As the only self help guide and

tutorial based on IEEE EIA 12207 0 1997 this is an essential reference for software engineers programmers and project managers This volume can also form part of an upper division undergraduate or graduate level engineering course Each chapter in this volume consists of an introduction to the chapter s subject area and an orientation to the relevant areas of the SWEBOK followed by the supporting articles and where applicable the specific IEEE software engineering standard By emphasizing the IEEE software engineering standards the SWEBOK and the contributions of key authors the two volumes provide a comprehensive orientation to the landscape of software engineering as practiced today Contents Key concepts and activities of software and systems engineering Societal and legal contexts in which software development takes place Key IEEE software engineering standards Software requirements and methods for developing them Essential concepts and methods of software design Guidelines for the selection and use of tools and methods Major issues and activities of software construction Software development testing Preparation and execution of software maintenance programs
