Wavelets In Soft Computing:

Wavelets in Soft Computing Marc Thuillard,2001 This book presents the state of integration of wavelet theory and multiresolution analysis into soft computing It is the first book on hybrid methods combining wavelet analysis with fuzzy logic neural networks or genetic algorithms Much attention is given to new approaches fuzzy wavelet that permit one to develop using wavelet techniques linguistically interpretable fuzzy systems from data The book also introduces the reader to wavelet based genetic algorithms and multiresolution search A special place is given to methods that have been implemented in real world applications particularly the different techniques combining fuzzy logic or neural networks with wavelet theory

Wavelets In Soft Computing (Second Edition) Marc Thuillard,2022-09-09 The comprehensive compendium furnishes a quick and efficient entry point to many multiresolution techniques and facilitates the transition from an idea into a real project It focuses on methods combining several soft computing techniques fuzzy logic neural networks genetic algorithms in a multiresolution framework Illustrated with numerous vivid examples this useful volume gives the reader the necessary theoretical background to decide which methods suit his her needs New materials and applications for multiresolution analysis are added including notable research topics such as deep learning graphs and network analysis *Artificial Intelligence and Soft Computing* Leszek Rutkowski, Marcin Korytkowski, Rafał Scherer, Ryszard Tadeusiewicz, Lotfi A.

Methodologies For The Conception, Design And Application Of Soft Computing - Proceedings Of The 5th International Conference On Soft Computing And Information/Intelligent Systems (In 2 Volumes) Gen Matsumoto, Takeshi Yamakawa,1998-08-25 Soft computing is the common name for a certain form of natural information processing that has its original form in biology especially in the function of human brain It is a discipline rooted in a group of technologies such as fuzzy logic neural networks chaos genetic algorithms probabilistic reasoning and learning algorithms Today soft computing has become an acknowledged concept however for a long time such components of soft computing have been debated and individually developed Since its beginning in 1990 the series of IIZUKA conferences has covered various kinds of technologies that constitute soft computing This series has played a pioneering role in promoting the development of a

symbiotic relationship between the various technologies of soft computing At IIZUKA 98 the 5th International Conference on Soft Computing and Information Intelligent Systems new developments and results in this field were introduced and discussed by researchers from academic governmental and industrial institutions around the world This volume presents the opening lecture by Prof Walter J Freeman the keynote speech by Dr Gen Matsumoto the plenary lectures by 5 eminent researchers and about 230 carefully selected papers drawn from more than 25 countries It documents current research and in depth studies on the fundamental aspects of soft computing and their practical applications

Wavelets Robert X Gao, Ruqiang Yan, 2010-12-07 *Wavelets Theory and Applications for Manufacturing* presents a systematic description of the fundamentals of wavelet transform and its applications Given the widespread utilization of rotating machines in modern manufacturing and the increasing need for condition based as opposed to fix interval intelligent maintenance to minimize machine down time and ensure reliable production it is of critical importance to advance the science base of signal processing in manufacturing This volume also deals with condition monitoring and health diagnosis of rotating machine components and systems such as bearings spindles and gearboxes while also Providing a comprehensive survey on wavelets specifically related to problems encountered in manufacturing Discussing the integration of wavelet transforms with other soft computing techniques such as fuzzy logic for machine defect and severity classification Showing how to custom design wavelets for improved performance in signal analysis Focusing on wavelet transform as a tool specifically applied and designed for applications in manufacturing *Wavelets Theory and Applications for Manufacturing* presents material appropriate for both academic researchers and practicing engineers working in the field of manufacturing

Wavelet Shrinkage Based Image Denoising Using Soft Computing Rong Bai, 2008 Noise reduction is an open problem and has received considerable attention in the literature for several decades Over the last two decades wavelet based methods have been applied to the problem of noise reduction and have been shown to outperform the traditional Wiener filter Median filter and modified Lee filter in terms of root mean squared error MSE peak signal noise ratio PSNR and other evaluation methods In this research two approaches for the development of high performance algorithms for de noising are proposed both based on soft computing tools such as fuzzy logic neural networks and genetic algorithms First an improved additive noise reduction method for digital grey scale nature images which uses an interval type 2 fuzzy logic system to shrink wavelet coefficients is proposed This method is an extension of a recently published approach for additive noise reduction using a type 1 fuzzy logic system based wavelet shrinkage Unlike the type 1 fuzzy logic system based wavelet shrinkage method the proposed approach employs a thresholding filter to adjust the wavelet coefficients according to the linguistic uncertainty in neighborhood values inter scale dependencies and intra scale correlations of wavelet coefficients at different resolutions by exploiting the interval type 2 fuzzy set theory Experimental results show that the proposed approach can efficiently and rapidly remove additive noise from digital grey scale images Objective analysis and visual observations show that the

proposed approach outperforms current fuzzy non wavelet methods and fuzzy wavelet based methods and is comparable with some recent but more complex wavelet methods such as Hidden Markov Model based additive noise de noising method The main differences between the proposed approach and other wavelet shrinkage based approaches and the main improvements of the proposed approach are also illustrated in this thesis Second another improved method of additive noise reduction is also proposed The method is based on fusing the results of different filters using a Fuzzy Neural Network FNN The proposed method combines the advantages of these filters and has outstanding ability of smoothing out additive noise while preserving details of an image e g edges and lines effectively A Genetic Algorithm GA is applied to choose the optimal parameters of the FNN The experimental results show that the proposed method is powerful for removing noise from natural images and the MSE of this approach is less and the PSNR of is higher than that of any individual filters which are used for fusion Finally the two proposed approaches are compared with each other from different point of views such as objective analysis in terms of mean squared error MSE peak signal to noise ratio PSNR image quality index IQI based on quality assessment of distorted images and Information Theoretic Criterion ITC based on a human vision model computational cost universality and human observation The results show that the proposed FNN based algorithm optimized by GA has the best performance among all testing approaches Important considerations for these proposed approaches and future work are discussed

Soft Computing Techniques and Applications Robert John,2000-01-24 The book is a collection of papers presented in the United Kingdom at an international two day workshop on Soft Computing held at the De Montfort University It consists of 38 papers representing the current interests in the fields of fuzzy logic artificial neural networks and genetic algorithms In particular there is a strong emphasis on the use of these techniques for applications that tackle real problems faced in industry The strength of the work is that it is a snapshot of current important research interests in these areas both from a research and application point of view It will be of interest to researchers both academic and from industry as well as post graduate students who wish to see some of the more recent developments in the soft computing field
