Advanced Inorganic Fluorides: Synthesis, Characterization and Applications T. Nakajima, B. Žemva, A. Tressaud, 2000-05-12 This book summarizes recent progresses in inorganic fluorine chemistry Highlights include new aspects of inorganic fluorine chemistry such as new synthetic methods structures of new fluorides and oxide fluorides their physical and chemical properties fluoride catalysts surface modifications of inorganic materials by fluorination process new energy conversion materials and industrial applications Fluorine has quite unique properties highest electronegativity very small polarizability In fact fluorine is so reactive that it forms fluorides with all elements except with the lightest noble gases

helium neon and argon Originally due to its high reactivity fluoride chemistry faced many technical difficulties and remained undeveloped for many years Now however a large number of fluorine containing materials are currently produced for practical uses on an industrial scale and their applications are rapidly extending to many fields Syntheses and structure analyses of thermodynamically unstable high oxidation state fluorides have greatly contributed to inorganic chemistry in this decade Fluoride catalysts and surface modifications using fluorine are developing a new field of fluorine chemistry and will enable new syntheses of various compounds The research on inorganic fluorides is now contributing to many chemical energy conversion processes such as lithium batteries Furthermore new theoretical approaches to determining the electronic structures of fluorine compounds are also progressing On the industrial front the use of inorganic fluorine compounds is constantly increasing for example in semi conductor industry

Advanced Inorganic Fluorides Synthesis Characterization and Applications focuses on these new features in inorganic fluorine chemistry and its industrial applications The authors are outstanding experts in their fields and the contents of the book should prove to be of valuable assistance to all chemists graduates students and researchers in the field of fluorine chemistry

Research in the Broad Field of Synthesis and Characterization of Inorganic Compounds and Materials B. Peter Block, PENNSALT CHEMICALS CORP KING OF PRUSSIA PA RESEARCH AND DEVELOPMENT Dept, 1969 Work was performed toward the synthesis of polymers without carbon carbon bonds in their backbones in areas ranging from completely inorganic systems to systems based on heterocyclic rings Technical reports publications issued and allowed patents oral presentations and daughter contracts stemming from the fundamental program are tabulated and an abstract is given for each technical report The most interesting polymers discovered are the poly metal phosphinates a family of coordination polymers in which phosphinate anions serve as bridging groups between coordination centers Author
