

The Vascular System

What is the vascular system?

The vascular system is a network of blood vessels that transport blood throughout the body. It consists of the heart, arteries, and veins. The system is responsible for delivering oxygen and nutrients to the body's cells and removing waste products.

The heart

The heart is a muscular organ that pumps blood throughout the body. It consists of four chambers: the right and left atria and ventricles. The heart is located in the chest cavity, slightly to the left of the center.

Typical artery (cross-section)

Typical vein (cross-section)

Blood vessels

Blood vessels are the network of tubes that carry blood throughout the body. They are divided into arteries, veins, and capillaries. Arteries carry oxygenated blood away from the heart, while veins carry deoxygenated blood back to the heart. Capillaries are the smallest blood vessels and are where the exchange of oxygen and nutrients occurs.

Importance of pressure

Blood pressure is the force exerted by the blood against the walls of the blood vessels. It is essential for the flow of blood throughout the body. High blood pressure (hypertension) can lead to various health problems, including heart disease and stroke. Low blood pressure (hypotension) can lead to dizziness and fainting.

Arterial valve work

Arteries have the same type of valves found in veins towards the heart and during pressure of flow. During backflow, the valves close, preventing backflow. In the same way, during the flow of blood, the valves open, allowing the blood to flow forward. The valves in veins are called venous valves and are found in the veins.
