Systems of Microdifferential Equations of Infinite Order T. Kawai, 1984

desingularization theorem for systems of microdifferential equations Orlando Neto, 1991

Microdifferential Systems in the Complex Domain P. Schapira, 2012-12-06 The words microdifferential systems in the complex domain refer to several branches of mathematics micro local analysis linear partial differential equations algebra and complex analysis The microlocal point of view first appeared in the study of propagation of singularities of differential equations and is spreading now to other fields of mathematics such as algebraic geometry or algebraic topology However it seems that many analysts neglect very elementary tools of algebra which forces them to confine themselves to the study of a single equation or particular square matrices or to carry on heavy and non intrinsic formula tions when studying more general systems On the other hand many algebraists ignore everything about partial differential equations such as for example the Cauchy problem although it is a very natural and geometrical setting of inverse image Our aim will be to present to the analyst the algebraic methods which naturally appear in such problems and to make available to the algebraist some topics from the theory of partial differential equations stressing its geometrical aspects Keeping this goal in mind one can only remain at an elementary level

Fundamentals of Algebraic Microlocal Analysis Goro Kato, Daniele C Struppa, 2020-08-11 Provides a thorough introduction to the algebraic theory of systems of differential equations as developed by the Japanese school of M Sato and his colleagues Features a complete review of hyperfunction microfunction theory and the theory of D modules Strikes the perfect balance between analytic and algebraic aspects

On Holonomic Systems of Micro-differential Equations Masaki Kashiwara, 1979

D-Modules and Microlocal Geometry Masaki Kashiwara, Teresa Monteiro Fernandes, Pierre Schapira, 2011-06-15 The series is aimed specifically at publishing peer reviewed reviews and contributions presented at workshops and conferences Each volume is associated with a particular conference symposium or workshop These events cover various topics within pure and applied mathematics and provide up to date coverage of new

developments methods and applications

Foundations of Algebraic Analysis (PMS-37), Volume 37 Masaki Kashiwara, Takahiro Kawai, Tatsuo Kimura, 2017-03-14 The use of algebraic methods for studying analysts is an important theme in modern mathematics The most significant development in this field is microlocal analysis that is the local study of differential equations on cotangent bundles This treatise provides a thorough description of microlocal analysis starting from its foundations The book begins with the definition of a hyperfunction It then carefully develops the microfunction theory and its applications to differential equations and theoretical physics It also provides a description of microdifferential equations the microlocalization of linear differential equations Finally the authors present the structure theorems for systems of microdifferential equations where the quantized contact transformations are used as a fundamental device The microfunction theory together with the quantized contact transformation theory constitutes a valuable new viewpoint in linear partial differential equations Originally published in 1986 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Gröbner Deformations of Hypergeometric Differential Equations Mutsumi Saito, Bernd Sturmfels, Nobuki Takayama, 2013-03-09 In recent years new algorithms for dealing with rings of differential operators have been discovered and implemented A main tool is the theory of Gröbner bases which is reexamined here from the point of view of geometric deformations Perturbation techniques have a long tradition in analysis Gröbner deformations of left ideals in the Weyl algebra are the algebraic analogue to classical perturbation techniques The algorithmic methods introduced here are particularly useful for studying the systems of multidimensional hypergeometric PDEs introduced by Gelfand Kapranov and Zelevinsky The Gröbner deformation of these GKZ hypergeometric systems reduces problems concerning hypergeometric functions to questions about commutative monomial ideals and leads to an unexpected interplay between analysis and combinatorics This book contains a number of original research results on holonomic systems and hypergeometric functions and raises many open problems for future research in this area

New Trends in Microlocal Analysis J.-M. Bony, M. Morimoto, 2012-12-06 Microlocal analysis began around 1970 when Mikio Sato along with coauthors Masaki Kashiwara and Takahiro Kawai wrote a decisive article on the structure of pseudodifferential equations thus laying the foundation of D modules and the singular spectrums of hyperfunctions The key idea is the analysis of problems on the phase space i.e the cotangent bundle of the base space Microlocal analysis is an active area of mathematical research that has been applied to many fields such as real and complex analysis representation theory topology number theory and mathematical physics This volume contains the presentations given at a seminar jointly organized by the Japan Society for the Promotion of Science and Centre National des Recherches

Scientifics entitled *New Trends in Microlocal Analysis* The book is divided into three parts partial differential equations and mathematical analysis mathematical physics and algebraic analysis D modules and sheave theory The large variety of new research that is covered will prove invaluable to students and researchers alike *Finiteness Theorem for Holonomic Systems of Micro-differential Equations* Masaki Kashiwara, Takahiro Kawai, 1976 **Princeton Mathematical Series**, 1986

Seminar on Micro-Local Analysis Victor Guillemin, Masaki Kashiwara, Takahiro Kawai, 2016-03-02 Based on a seminar sponsored by the Institute for Advanced Study in 1977 1978 this set of papers introduces micro local analysis concisely and clearly to mathematicians with an analytical background The papers treat the theory of microfunctions and applications such as boundary values of elliptic partial differential equations propagation of singularities in the vicinity of degenerate characteristics holonomic systems Feynman integrals from the hyperfunction point of view and harmonic analysis on Lie groups *Publications of the Research Institute for Mathematical Sciences*, 2001 **Mikio Sato** Masaki Kashiwara, William Casper Graustein Professor of Mathematics and Former Chairman of Mathematics Department Shing-Tung Yau, Takahiro Kawai, 1998 *Annales Scientifiques de L'École Normale Supérieure* École normale supérieure (France), 2011 *Sūgaku Expositions*, 1996 *Hyperbolic Equations and Related Topics* Shigeru Mizohata, 1986 *Proceedings of the Japan Academy* Nihon Gakushuin, 2004
