

STATIC ELECTRICITY

Static Electricity

- Charge that is not passed through circuit when two objects together

Electric Force

- Interaction with matter in object, kg charge how far or not in circuit charge - movement of electrons

As Q goes up, force \rightarrow vs charge, goes more vs charge
 Charge Q : measures how much object will interact with electric/magnetic fields
 charge measured in coulombs (C)

- $1 \text{ C} = 1 \text{ amp} \cdot \text{sec}$
- $1 \text{ C} = 6.25 \times 10^{18}$ electrons

- Protons and electrons have charge of:

$$q_p = 1.602 \times 10^{-19} \text{ C}$$

- conductor material which is easily able to carry electric charge
 insulator material which is unable to carry electric charge
 when charges pass through insulators, they build up (stop moving)

- static electricity involves insulators

Example: hair sticking up

Atoms are neutral, no charge, cancel out when electrons rubbed on hair, e^- rubbed off hair and on balloon

balloon is insulator, e^- don't re-distribute

so e^- rub into hair, balloon, gain \rightarrow vs charge

hair losing e^- , gains \rightarrow vs charge

\rightarrow vs charge, balloon, vs charged, hair

attracted to hair

so balloon pulled during that hair, hair is attracted to it

so attract hair to itself

- in examples:

electric force acting on object due to other and

electric force acting on hair due to balloon

electric force, F , has cause attraction/repulsion between 2 charged objects

size of electrical force depends on charge (q), electrical field, E

$$F = Eq$$

Electric Fields

- source charges charge that creates electric field around it

source of charge

electric field area around charged object

area of space where other charged particles are affected

- creating electric fields

how big electric field is

how it affects charge around

we look to show shape of field

most electric fields are radial (parallel lines)

or radial from charge (center of isolated line)

- direction of other charges are attracted or repelled

direction they move when affected by electric field

direction way the charge would move if put into field

in case pointing away

\rightarrow surrounding single charge/object

- stronger and closer lines are

stronger field, greater ability to attract particles in range

stronger E units: N/C

$$E = \frac{F}{q}$$

Uniform Electric Fields

- field has same strength everywhere
 charge will be attracted same level in any other place
 straight parallel, evenly spaced

- eg: two metal plates, $+$ and $-$

plates are source charge of electric field between metal plates

force vs charge in uniform field revealed by two plates, arrow from $+$ to $-$

- voltage:

2 metal plates make charge between plates move

to create field between plates is giving energy to charge in between

voltage when charges gain or lose energy

if energy is lost, gain energy \rightarrow vs ΔE

if energy is lost, losing energy \rightarrow vs ΔE

Electric Potential Energy

- ΔE_p electrical potential energy
 how much charge wants to move when placed in electric field
 depends on where positioned, how big field is

resulted charged plates (electric field is uniform)

symbolizing Q against \rightarrow vs plate

As soon as let go, ends to \rightarrow vs plate

to electric potential energy was converted into kinetic energy

potential energy of charge (Q) put in electric field (E) at distance (d):

$$\Delta E_p = Eqd$$

- kinetic energy: energy of movement

- size of electric potential energy on charge in electric field depends on:

charge in electric field, change in potential

no distance between, electric charge, electric field strength, E

voltage, electric field and put charge, more

size of charge, q

no bigger charge, electric field, more

Velocity

- if no friction, electrical potential energy = kinetic energy

$$\Delta E_p = K_e$$

1. calc. electrical potential energy

2. calc. kinetic energy

3. calc. $E_k = \frac{1}{2}mv^2$ to find velocity

Work

- giving largest electric force, use charge to \rightarrow vs plate

to energy must be put in

put work, move charge from plate to create to move to, transfer more electrical energy

center amount of energy to move charged particle between charges to would be repeated

symbolizing

with Coulomb, Q

As particle is moved further than charges attracted to, why? no ΔE

Millikan Oil Drop

- Robert Millikan noticed that the procedure, size of charge on electron
 was an integer multiple charged plates had surrounding object
 charged electron, field to hold oil droplets, work drop falling due to gravity
 when stop and start, force of gravity, electric force
