mix to support the integration of sustainable consumption and production patterns by sector and theme Finally the book concentrates on the key issue of how to involve stakeholders in IPP in order to encourage continuous innovations for sustainability throughout the value chain Governance of Integrated Product Policy aims to fill a clear gap in work to date on sustainable production and consumption by providing researchers and practitioners from politics business and civil society new insights into modern environmental governance in practice *Metal Recycling*, 2013 Metal recycling is a complex business that is becoming increasingly difficult Recycling started long ago when people realized that it was more resource and cost efficient than just throwing away the resources and starting all over again In this report we discuss how to increase metal recycling rates and thus resource efficiency from both quantity and quality viewpoints The discussion is based on data about recycling input and the technological infrastructure and worldwide economic realities of recycling Decision makers set increasingly ambitious targets for recycling but far too much valuable metal today is lost because of the imperfect collection of end of life EoL products improper practices or structural deficiencies within the recycling chain which hinder achieving our goals of high resource efficiency and resource security and of better recycling rates
