**Elastic Analysis of Slab Structures** Radu Negrutiu,2012-12-06 Any practitioner who takes his profession in earnest such that daily work is not a heavy duty but part of their life will recognize in this book the rigorousness of the analysis and the comprehensive presentation of the problems This professional attitude is solely able to make the research and design engineer deal with strength structures and their behaviour Indeed the computational means that are nowadays available permit the numerical computation of whatever problem the program libraries are extremely rich and programs themselves have developed intensively However though computers are available at any moment without restrictions on the frequency with which they are employed they finally impoverish the creative competency of the civil engineer Thus he will calculate increasingly more while devising increasingly less He will draw less and less on the experience gained in devising and implementing bearing structures because the computational process can be repeated as often as desired over a minimum time period by means of the available programs We note that nowadays structures are no longer investigated or economically designed to comply with the requirements of the topic of interest Much to the contrary the solutions are chosen so as to comply with the capabilities of the programs A bearing structure lives as is prescribed by its initial constructive data

Bearing Capacity of Roads, Railways and Airfields Andreas Loizos,Imad Al-Qadi,Tom Scarpas,2017-07-20 Bearing Capacity of Roads Railways and Airfields includes the contributions to the 10th International Conference on the Bearing Capacity of Roads Railways and Airfields BCRRA 2017 28 30 June 2017 Athens Greece The papers cover aspects related to materials laboratory testing design construction maintenance and management systems of transport infrastructure and focus on roads railways and airfields Additional aspects that concern new materials and characterization alternative rehabilitation techniques technological advances as well as pavement and railway track substructure sustainability are included The contributions discuss new concepts and innovative solutions and are concentrated but not limited on the following topics Unbound aggregate materials and soil properties Bound materials characteristics mechanical properties and testing Effect of traffic loading In situ measurements techniques and monitoring Structural evaluation Pavement serviceability condition Rehabilitation and maintenance issues Geophysical assessment Stabilization and reinforcement Performance modeling Environmental challenges Life cycle assessment and sustainability Bearing Capacity of Roads Railways and Airfields is essential reading for academics and professionals involved or interested in transport infrastructure systems in particular roads railways and airfields      **Pavement Engineering** Rajib B.
