Statistical And Neural Classifiers:

Statistical and Neural Classifiers Sarunas Raudys, 2001-01-29 The classification of patterns is an important area of research which is central to all pattern recognition fields including speech image robotics and data analysis Neural networks have been used successfully in a number of these fields but so far their application has been based on a black box approach with no real understanding of how they work In this book Sarunas Raudys an internationally respected researcher in the area provides an excellent mathematical and applied introduction to how neural network classifiers work and how they should be used *Handbook Of Pattern Recognition And Computer Vision (2nd Edition)* Chi Hau Chen, Louis-francois Pau, Patrick S P Wang, 1999-03-12 The very significant advances in computer vision and pattern recognition and their applications in the last few years reflect the strong and growing interest in the field as well as the many opportunities and challenges it offers The second edition of this handbook represents both the latest progress and updated knowledge in this dynamic field The applications and technological issues are particularly emphasized in this edition to reflect the wide applicability of the field in many practical problems To keep the book in a single volume it is not possible to retain all chapters of the first edition However the chapters of both editions are well written for permanent reference This indispensable handbook will continue to serve as an authoritative and comprehensive guide in the field **Multiple Classifier Systems**, 2004 **Machine Learning Neural And Statistical Classification** Donald Michie, 2009 **Combining Pattern Classifiers** Ludmila I.
