Technologies Of Power:

Technologies of Power Michael Thad Allen, Gabrielle Hecht, 2001-05-25 This collection explores how technologies become forms of power how people embed their authority in technological systems and how the machines and the knowledge that make up technical systems strengthen or reshape social political and cultural power The authors suggest ways in which a more nuanced investigation of technology s complex history can enrich our understanding of the changing meanings of modernity They consider the relationship among the state expertise and authority the construction of national identity changes in the structure and distribution of labor political ideology and industrial development and political practices during the Cold War The essays show how insight into the technological aspects of such broad processes can help synthesize material and cultural methods of inquiry and how reframing technology s past in broader historical terms can suggest new directions for science and technology studies The essays were written in honor of Thomas Parke Hughes and Agatha Chipley Hughes whose spirit of inquiry they seek to continue Contributors Janet Abbate Michael Thad Allen W Bernard Carlson Gabrielle Hecht Erik P Rau Eric Schatzberg Amy Slaton John Staudenmaier Edmund N Todd Hans Weinberger

Technologies of Power Majid Tehranian, 1990 Within a comparative theoretical and global network this volume focuses on the impact of information technologies on the prospects for democratic development It deals with the hopes as well as the fears for democracy and development that have emerged out of the current technological revolution in information and communication The volume argues that information technologies have historically played a dual and paradoxical role in political formations Generally the Big Media the national press broadcasting and mainframe computers have served the centralizing forces while the Small Media the alternative press small scale audio video production and transmission facilities and increasingly personal computing networking have provided the channel for community resistance and mobilization The volume argues that the new information technologies like the old should be viewed neither as technologies of freedom nor of tyranny but primarily as technologies of power that lock into existing or emerging techno structures of power **New**
