which is also required for the development of basic tissue structures such as spheres clusters and vesicles in the morphogenetic processes of development Therefore individual regulation and orchestration of cell adhesion and migration are quite important for appropriate tissue organ formation during development However how cell adhesion and migration are regulated and orchestrated during development How cell adhesion and migration affects tissue formation during development To answer these questions we assembled several review and research articles in this eBook By assembling these articles we could explore the presence of core regulatory mechanisms and deepen the current understanding of cell adhesion and migration during the development of multicellular organisms
