Chemical Oceanography Steven R. Emerson, Roberta C. Hamme, 2022-04-07 A broad clear introductory textbook on chemical oceanography for undergraduate and graduate students and a reference text for researchers El Niño A. M. Babkina, 2003 The term El Niño Spanish for the Christ Child was originally used by fishermen along the coasts of Ecuador and Peru to refer to a warm ocean current that typically appears around Christmastime and lasts for several months Fish are less

abundant during these warm intervals yet in some years however the water is especially warm and the break in the fishing season persists into May or even June El Ni o also brings heavy rains During the past 40 years nine El Ni os have affected the South American coast Most of them raised water temperatures not only along the coast but also at the Galapagos islands and in a belt stretching 5000 miles across the equatorial Pacific The weaker events raised sea temperatures only by one to two degrees Fahrenheit but the strong ones like the El Ni o of 1982 83 left an imprint not only upon the local weather and marine life but also on climatic conditions around the globe This book includes a detailed overview and bibliography with complete title author and subject indexes Global Climate Change ,1990 **Ocean-Atmosphere Interactions of Gases and Particles** Peter S. Liss, Martin T. Johnson, 2013-12-18 The oceans and atmosphere interact through various processes including the transfer of momentum heat gases and particles In this book leading international experts come together to provide a state of the art account of these exchanges and their role in the Earth system with particular focus on gases and particles Chapters in the book cover i the ocean atmosphere exchange of short lived trace gases ii mechanisms and models of interfacial exchange including transfer velocity parameterisations iii ocean atmosphere exchange of the greenhouse gases carbon dioxide methane and nitrous oxide iv ocean atmosphere exchange of particles and v current and future data collection and synthesis efforts The scope of the book extends to the biogeochemical responses to emitted deposited material and interactions and feedbacks in the wider Earth system context This work constitutes a highly detailed synthesis and reference of interest to higher level university students Masters PhD and researchers in ocean atmosphere interactions and related fields Earth system science marine atmospheric biogeochemistry climate Production of this book was supported and funded by the EU COST Action 735 and coordinated by the International SOLAS Surface Ocean Lower Atmosphere Study project office **Earth Resources** ,1987 *Monthly Weather Review* ,1972 **Dynamics of the Tropical Atmosphere and Oceans** Peter J. Webster, 2020-06-08 This book presents a unique and comprehensive view of the fundamental dynamical and thermodynamic principles underlying the large circulations of the coupled ocean atmosphere system Dynamics of The Tropical Atmosphere and Oceans provides a detailed description of macroscale tropical circulation systems such as the monsoon the Hadley and Walker Circulations El Ni o and the tropical ocean warm pool These macroscale circulations interact with a myriad of higher frequency systems ranging from convective cloud systems to migrating equatorial waves that attend the low frequency background flow Towards understanding and predicting these circulation systems A comprehensive overview of the dynamics and thermodynamics of large scale tropical atmosphere and oceans is presented using both a reductionist and holistic perspectives of the coupled tropical system The reductionist perspective provides a detailed description of the individual elements of the ocean and atmospheric circulations The physical nature of each component of the tropical circulation such as the Hadley and Walker circulations the monsoon the incursion of extratropical phenomena into the tropics precipitation distributions equatorial waves and disturbances described in detail The holistic perspective

provides a physical description of how the collection of the individual components produces the observed tropical weather and climate How the collective tropical processes determine the tropical circulation and their role in global weather and climate is provided in a series of overlapping theoretical and modelling constructs The structure of the book follows a graduated framework Following a detailed description of tropical phenomenology the reader is introduced to dynamical and thermodynamical constraints that guide the planetary climate and establish a critical role for the tropics Equatorial wave theory is developed for simple and complex background flows including the critical role played by moist processes The manner in which the tropics and the extratropics interact is then described followed by a discussion of the physics behind the subtropical and near equatorial precipitation including arid regions The El Niño phenomena and the monsoon circulations are discussed including their covariance and predictability Finally the changing structure of the tropics is discussed in terms of the extent of the tropical ocean warm pool and its relationship to the intensity of global convection and climate change Dynamics of the Tropical Atmosphere and Oceans is aimed at advanced undergraduate and early career graduate students It also serves as an excellent general reference book for scientists interested in tropical circulations and their relationship with the broader climate system
