Engelschall,2018-12-18 User Interfaces UI of applications since about 2010 are usually implemented by dedicated frontend programs following a Rich Client architecture and are based on the Web technologies HTML CSS and JavaScript This approach provides great flexibility and power but comes with an inherent great overall complexity of UIs running on a

continuously changing technology stack This is because since over twenty years Web technologies still progress at an extremely high invention rate and unfortunately at the same time still regularly reinvent part of their self This situation is harmless for small UIs consisting of just a handful dialogs and having to last for just about one or two years However it becomes a major hurdle for large UIs consisting of a few hundred dialogs and having to last for five or more years This is especially the case for the complex UIs of industrial Business Information Systems The main scientific contribution of this dissertation is the Hierarchical User Interface Component Architecture HUICA a scalable software architecture for Rich Client based User Interfaces It is primarily based on the important architecture principle Separation of Concerns SoC the derived idea of Hierarchical Composition the invented design pattern Model View Controller Component Tree MVC CT and the existing concepts Presentation Model and Data Binding Principles of Health Interoperability HL7 and SNOMED Tim Benson,2010-05-06 Joined up healthcare makes information available when and where it is needed to improve safety efficiency and effectiveness Politicians may take interoperability between healthcare computer systems for granted but it is non trivial Healthcare integration projects are notoriously under estimated and come in over budget and over time Joined up healthcare depends on standards The two leading standards are the SNOMED CT which is a clinical terminology semantics and HL7 Version 3 which is a specialised healthcare interoperability language syntax Both are new complex and fit for purpose Tim Benson believes there is an unmet need for a book on Healthcare Integration Some health informatics textbooks include chapters on HL7 and or SNOMED but these are usually quite short and cannot provide even an adequate introduction There is little of much value on the Internet or in journals or conference proceedings **Containerisation and**
