## Unresting Cells:

**Unresting Cells** Ralph Waldo Gerard,1961      *The New East* John William Robertson Scott,1917      *Theosophical Outlook* ,1918      **Unravelling the Double Helix** Gareth Williams,2019-10-01 Unraveling the Double Helix covers the most colorful period in the history of DNA from the discovery of nuclein in the late 1860s to the publication of James Watson s The Double Helix in 1968 These hundred years included the establishment of the Nobel Prize antibiotics x ray crystallography the atom bomb and two devastating world wars events which are strung along the thread of DNA like beads on a necklace The story of DNA is a saga packed with awful mistakes as well as brilliant science with a wonderful cast of heroes and villains Surprisingly much of it is unfamiliar The elucidation of the double helix was one of the most brilliant gems of twentieth century science but some of the scientists who paved the way have been airbrushed out of history James Watson and Francis Crick solved a magnificent mystery but Gareth Williams shows that their contribution was the last few pieces of a gigantic jigsaw puzzle assembled over several decades The book is comprehensive in scope covering the first century of the history of DNA in its entirety including the eight decades that have been neglected by other authors It also explores the personalities of the main players the impact of their entanglement with DNA and what unique qualities make great scientists tick      [The Mechanism of Evolution: A New Look at Old Ideas](#) M. de Issekutz Wolsky,A. Wolsky,1976-10-11      *The Meaning of Nucleocytoplasmic Transport* Paul S. Agutter,Philip L. Taylor,2013-06-29 The means by which proteins and RNAs are exchanged between cytoplasm and nucleus have interested cell biologists for many years and the field has seen a number of exciting recent advances Much has been learned about the intricate architecture of the nuclear pore complex the mechanisms by which transport substrates are sorted and the supply of energy for exchange processes This book attempts a general review of the growing body of knowledge However the authors challenge the presumptions implicit in some interpretations of the evidence re examining the concept of transport within cells and suggesting that lessons learned from nucleocytoplasmic transport studies can elucidate wider aspects of cell biology      *In Search of the Physical Basis of Life* Gilbert Ling,2012-12-06 It is highly probable that the ability to distinguish between living and nonliving objects was already well developed in early prehuman animals Cognizance of the difference between these two classes of objects long a part of human knowledge led naturally to the division of science into two categories physics and chemistry on the one hand and biology on the other So deep was this belief in the separateness of physics and biology that as late as the early nineteenth century many biologists still believed in vitalism according to which living phenomena fall outside the confines of the laws of physics It was not until the middle of the nineteenth century that Carl Ludwig Hermann von Helmholtz Emil DuBois Reymond and Ernst von Bricke inaugurated a physicochemical approach to physiology in which it was recognized clearly that one set of laws must govern the properties and behavior of all matter living and nonliving The task of a biologist is like trying to solve a gigantic multidimensional crossword fill in the right physical concepts at the right places The biologist depends on puzzle

to the maturation of the science of physics much as the crossword solver depends on a large and correct vocabulary The solver of crossword puzzles needs not just a good vocabulary but a special vocabulary Words like inee and oke are vitally useful to him but are not part of the vocabulary of an English professor
