 an important impact on world economic activity with the busts in world output gap corresponding to unobserved systemic
 risk associated with major financial events In addition systemic risk shocks are shown to be important drivers of output gaps
 while country risk premium shocks can have important effects on the trade balance Commodity prices in particular the price
 of oil are shown to be demand driven The model performs well at one and four quarter horizons compared to a survey of
 analysts forecasts In addition systemic risk shocks explain a large share of the forecast variance for the world output gap
