The Nuclear Duel:

The Nuclear Duel Simon Schuster,1985-01-01 *The Nuclear Duel* ,1985-01-01 **Internationalization of the Nuclear Fuel Cycle** Russian Academy of Sciences,Russian Committee on the Internationalization of the Civilian Nuclear Fuel Cycle,National Research Council,National Academy of Sciences,Division on Earth and Life Studies,Nuclear and Radiation Studies Board,Policy and Global Affairs,Committee on International Security and Arms Control,U.S. Committee on the Internationalization of the Civilian Nuclear Fuel Cycle,2009-01-26 The so called nuclear renaissance has increased worldwide interest in nuclear power This potential growth also has increased in some quarters concern that nonproliferation considerations are not being given sufficient attention In particular since introduction of many new power reactors will lead to requiring increased uranium enrichment services to provide the reactor fuel the proliferation risk of adding enrichment facilities in countries that do not have them now led to proposals to provide the needed fuel without requiring indigenous enrichment facilities Similar concerns exist for reprocessing facilities Internationalization of the Nuclear Fuel Cycle summarizes key issues and analyses of the topic offers some criteria for evaluating options and makes findings and recommendations to help the United States the Russian Federation and the international community reduce proliferation and other risks as nuclear power is used more widely This book is intended for all those who are concerned about the need for assuring fuel for new reactors and at the same time limiting the spread of nuclear weapons This audience includes the United States and Russia other nations that currently supply nuclear material and technology many other countries contemplating starting or growing nuclear power programs and the international organizations that support the safe secure functioning of the international nuclear fuel cycle most prominently the International Atomic Energy Agency **Managing the Nuclear Fuel Cycle** Mary Beth Nikitin,2011-05 A major concern about the global expansion of nuclear power is the potential spread of nuclear fuel cycle technology particularly uranium enrichment and spent fuel reprocessing that could be used for nuclear weapons Despite 30 years of effort to limit access to uranium enrichment several undeterred states pursued clandestine nuclear programs Contents of this report 1 Intro 2 Worldwide Nuclear Power Status Nuclear Fuel Services Market Waste Disposal and Energy Security 3 Assurance of Fuel Supply Supplier Guarantees Fuel Reserves and Enrichment Services Supply Side approaches 4 Comparison of Proposals 5 Prospects for Implementing Fuel Assurance Mechanisms This is a print on demand report *Internationalization of the Nuclear Fuel Cycle* Russian Academy of Sciences,Russian Committee on the Internationalization of the Civilian Nuclear Fuel Cycle,National Research Council,National Academy of Sciences,Division on Earth and Life Studies,Nuclear and Radiation Studies Board,Policy and Global Affairs,Committee on International Security and Arms Control,U.S. Committee on the Internationalization of the Civilian Nuclear Fuel Cycle,2009-02-26 The so called nuclear renaissance has increased worldwide interest in nuclear power This potential growth also has increased in some quarters concern that nonproliferation considerations are not being given sufficient attention In particular since introduction

of many new power reactors will lead to requiring increased uranium enrichment services to provide the reactor fuel the proliferation risk of adding enrichment facilities in countries that do not have them now led to proposals to provide the needed fuel without requiring indigenous enrichment facilities Similar concerns exist for reprocessing facilities Internationalization of the Nuclear Fuel Cycle summarizes key issues and analyses of the topic offers some criteria for evaluating options and makes findings and recommendations to help the United States the Russian Federation and the international community reduce proliferation and other risks as nuclear power is used more widely This book is intended for all those who are concerned about the need for assuring fuel for new reactors and at the same time limiting the spread of nuclear weapons This audience includes the United States and Russia other nations that currently supply nuclear material and technology many other countries contemplating starting or growing nuclear power programs and the international organizations that support the safe secure functioning of the international nuclear fuel cycle most prominently the International Atomic Energy Agency [ERDA Energy Research Abstracts](#) United States. Energy Research and Development Administration,1976 **Management of Radioactive Wastes from the Nuclear Fuel Cycle** International Atomic Energy Agency,1976 [Trends Towards Sustainability in the Nuclear Fuel Cycle](#) OECD Nuclear Energy Agency,2011 Interest in expanding nuclear power to cope with rising demand for energy and potential climate change places increased attention on the nuclear fuel cycle and whether significant moves are being taken towards ensuring sustainability over the long term Future nuclear power programme decisions will be increasingly based on strategic considerations involving the complete nuclear fuel cycle as illustrated by the international joint projects for Generation IV reactors Currently 90% of installed reactors worldwide operate on a once through nuclear fuel cycle using uranium oxide fuel While closing the fuel cycle has been a general aim for several decades progress towards that goal has been slow This report reviews developments in the fuel cycle over the past ten years potential developments over the next decade and the outlook for the longer term It analyses technological developments and government actions both nationally and internationally related to the fuel cycle and examines these within a set of sustainability parameters in order to identify trends and to make recommendations for further action *Plutonium, Power, and Politics* Gene I. Rochlin,2024-06-14 In the early 1970s the major industrial states were preparing to shift to nuclear fission as their principal source of electrical power But that change has not occurred In part this is due to a growing public recognition that techniques and institutions for management of spent nuclear fuel separated plutonium and long lived radioactive wastes are not yet fully developed The consequent pressures for resolution have spurred a series of often ill defined and sometimes contradictory attempts to promote international cooperation and control of hazardous activities How are these varied suggestions to be compared and evaluated By what criteria can plans be selected that are likely to be both effective and negotiable In this study Gene I Rochlin physicist and social scientist explores the technical political and institutional aspects of international nuclear export and fuel cycle policies He categorizes existing

proposals and suggests way to develop new ones that better promote both national and international goals Dr Rochlin argues neither for nor against the use of nuclear power or plutonium fuels Instead he addresses the question of how international arrangements could be reached that might jointly satisfy the objective of the several key nations yet not be too difficult to negotiate He concludes that a major fault has been the tendency to improvise arrangements for specific technical or industrial operations As a result overall social and political goals have become the bargaining points for compromise Yet attempts to simultaneously resolve all problems are unlikely to prove fruitful Dr Rochlin suggests instead the formation of institutions organized around more limited social political and technical objectives even at the expense of excluding some nations or omitting some aspects of the nuclear fuel cycle Only by so doing he argues can immediate agreements be reached that preserve the potential for more comprehensive future arrangements without sacrificing industrial environmental or nonproliferation goals This important book will be of interest to scientists social scientists government officials and others concerned with the problems of plutonium management and nuclear wastes This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1979

Safety Issues Associated with Plutonium Involvement in the Nuclear Fuel Cycle Theodore A. Parish, Vyacheslav V. Khromov, Igor Carron, 2012-12-06 The VOLGA conferences hosted in odd numbered years by the Department of Theoretical and Experimental Reactor Physics of the Moscow Engineering Physics Institute MEPHI are some of the most prestigious technical meetings held in Russia Traditionally these conferences present the opportunity for reactor physicists from around the world to gather at MEPHI s holiday camp on the banks of the Volga river near Tver to exchange ideas and explore innovative concepts related to nuclear power development In 1997 NATO became involved in the VOLGA meetings for the first time by co sponsoring VOLGA97 as an advanced research workshop This workshop broke with tradition a bit in that the venue was moved from MEPHI s holiday camp to a location nearer Moscow The workshop program was effectively organized in order to cover a broad range of topics relating to the theme of the meeting Generally the papers concerned safety related questions associated with utilizing both weapons grade and reactor grade plutonium in the nuclear fuel cycle including facility requirements licensing issues proliferation risks and a variety of advanced concepts for alternative fuel cycles The program contained a total of ninety nine papers presented in five days of sessions
