Applied Multivariate Statistics for the Social Sciences Keenan A. Pituch, James P. Stevens, 2015-12-07 Now in its 6th edition the authoritative textbook *Applied Multivariate Statistics for the Social Sciences* continues to provide advanced students with a practical and conceptual understanding of statistical procedures through examples and data sets from actual research studies. With the added expertise of co-author Keenan Pituch, University of Texas at Austin, this 6th edition retains many key features of the previous editions, including its breadth and depth of coverage, a review chapter on matrix algebra, applied coverage of MANOVA, and emphasis on statistical power. In this new edition, the authors continue to provide practical guidelines for checking the data, assessing assumptions, interpreting and reporting the results to help students analyze data from their own research confidently and professionally. Features new to this edition include a NEW chapter on Logistic Regression (Ch 11) that helps readers understand and use this very flexible and widely used procedure; a NEW chapter on Multivariate Multilevel Modeling (Ch 14) that helps readers understand the benefits of this newer procedure and how it can be used in conventional and multilevel settings; a NEW Example Results Section that illustrates how results should be presented in research papers and journal articles; NEW coverage of missing data (Ch 1) to help students understand and address problems associated with incomplete data; completely rewritten chapters on Exploratory Factor Analysis (Ch 9), Hierarchical Linear Modeling (Ch 13), and Structural Equation Modeling (Ch 16) with increased focus on understanding models and interpreting results; NEW analysis summaries; inclusion of more syntax explanations and reduction in the number of SPSS/SAS dialogue boxes to guide students through data analysis in a more streamlined and direct approach; updated syntax to reflect the newest versions of IBM SPSS 21 and SAS 9.3; a free online resources site at www.routledge.com/9780415836661 with data sets and syntax from the text, additional data sets, and instructor's resources including PowerPoint lecture slides for select chapters, a conversion guide for 5th edition adopters, and answers to exercises. Ideal for advanced graduate-level courses in education, psychology, and other social sciences in which multivariate statistics, advanced statistics, or quantitative techniques courses are taught, this book also appeals to practicing researchers as a valuable reference. Prerequisites include a course on factorial ANOVA and covariance; however, a working knowledge of matrix algebra is not assumed.

The Essentials of Political Analysis Philip H. Pollock, Philip H. Pollock III, Barry C. Edwards, 2025-01-28 *The Essentials of Political Analysis* empowers students to conduct political research and interpret statistical results, fostering important skills such as data analysis, critical thinking, and effective communication. Categorical Data Analysis for the Behavioral and Social Sciences Razia Azen, Cindy M. Walker, 2011-01-07 Featuring a practical approach with numerous examples, this book focuses on helping the reader develop a conceptual rather than technical understanding of categorical methods, making it a much more accessible text than others on the market. The

authors cover common categorical analyses and emphasize specific research questions that can be addressed by each analytic procedure so that readers are able to address the research questions they wish to answer To achieve this goal the authors Review the theoretical implications and assumptions underlying each of the procedures Present each concept in general terms and illustrate each with a practical example Demonstrate the analyses using SPSS and SAS and show the interpretation of the results provided by these programs A Look Ahead section at the beginning of each chapter provides an overview of the material covered so that the reader knows what to expect This is followed by one or more research questions that can be addressed using the procedure s covered in the chapter A theoretical presentation of the material is provided and illustrated using realistic examples from the behavioral and social sciences To further enhance accessibility the new procedures introduced in the book are explicitly related to analytic procedures covered in earlier statistics courses such as ANOVA and linear regression Throughout each chapter the authors use practical examples to demonstrate how to obtain and interpret statistical output in both SPSS and SAS Their emphasis on the relationship between the initial research question the use of the software to carry out the analysis and the interpretation of the output as it relates to the initial research question allows readers to easily apply the material to their own research The data sets for executing chapter examples using SAS Version 9 1 3 and or IBM SPSS Version 18 are available on a book specific web site These data sets and syntax allow readers to quickly run the programs and obtain the appropriate output The book also includes both conceptual and analytic end of chapter exercises to assist instructors and students in evaluating the understanding of the material covered in each chapter This book covers the most commonly used categorical data analysis procedures It is written for those without an extensive mathematical background and is ideal for graduate courses in categorical data analysis or cross classified data analysis taught in departments of psychology human development family studies sociology education and business Researchers in these disciplines interested in applying these procedures to their own research will appreciate this book s accessible approach

Applied Multivariate Research Lawrence S. Meyers, Glenn Gamst, A.J. Guarino, 2006 Multivariate designs were once the province of the very few exalted researchers who understood the underlying advanced mathematics Today through the sophistication of statistical software packages such as SPSS virtually all graduate students across the social and behavioural sciences are exposed to the complex multivariate statistical techniques without having to learn the mathematical computations needed to acquire the data output These students in psychology education political science etc will never be statisticians and appropriately so their preparation and coursework reflects less

of an emphasis on the mathematical complexities of multivariate statistics and more on the analysis and the interpretation of the methods themselves and the actual data output This book provides full coverage of the wide range of multivariate topics in a conceptual rather than mathematical approach The author gears toward the needs level of sophistication and interest in multivariate methodology of students in applied areas that need to focus on design and interpretation rather than the intricacies of specific computations The book includes Coverage of the most widely used multivariate designs multiple regression exploratory factor analysis MANOVA and structural equation modeling Integrated SPSS examples for hands on learning from one large study for consistency of application throughout the text Examples of written results to enable students to learn how the results of these procedures are communicated Practical application of the techniques using contemporary studies that will resonate with students
