The Art of Glass S. Knapp, 1998 *New Glass Architecture* Brent Richards, Gilbert Dennis, 2006-01-01 A timely look at the ways in which glass is utilized in some of today's most beautiful and experimental building designs. For centuries glass has provoked fascination with its properties as a versatile material that permits light to enter buildings in spectacular ways. Much of modern architecture has been conceived by using glass to create increasingly minimal structures to promote the notion of lightweight construction solutions and to allow maximum daylight into buildings. *New Glass Architecture* showcases the changing ways that aesthetics and methods for using glass have been developing since the 1990s. The book begins with an introduction that traces the history of key moments in glass architecture from the stained glass windows of Chartres Cathedral to the Crystal Palace of 1851 and early constructions by John Soane, Bruno Taut, Le Corbusier and Mies van der Rohe. Author Brent Richards explains the importance of glass artists in the second half of the 20th century and describes developments in glass technology over the last twenty years. Beautifully illustrated with newly commissioned photographs by Dennis Gilbert, the book features twenty-five case studies of recent glass constructions from around the world by such leading architects as Foster and Partners, Frank Gehry, Herzog & de Meuron, Steven Holl, Toyo Ito Associates, Jean Nouvel, Rafael Viñoly and Peter Zumthor. Each building is illustrated in full color and accompanied by detailed drawings. *New Glass Architecture* features these buildings and more: Chapel of Ignatius, Seattle; Cond Nast Caf, New York; DZ Bank, Berlin; Kimmel Center for the Performing Arts, Philadelphia; Kunsthhaus Graz, Austria; Laban Dance Centre, London; Torre Agbar, Barcelona. **The Builder**

Design & Applied Arts Index, 1997 *The Pottery Gazette*, 1921 **Glass Technology**, 1960 *Dictionary of Building and Civil Engineering*, 2013-12-20 In the last few decades, civil engineering has undergone substantial technological change, which has naturally been reflected in the terminology employed in the industry. Efforts are now being made in many countries to bring about a systematization and unification of technical terminology in general and that of civil engineering in particular. The publication of a multilingual dictionary of civil engineering terms has been necessitated by the expansion of international cooperation and information exchange in this field, as well as by the lack of suitable updated bilingual dictionaries. This Dictionary contains some 14,000 English terms together with their German, French, Dutch, and Russian equivalents, which are

used in the main branches of civil engineering and relate to the basic principles of structural design and calculations the elasticity theory strength of materials soil mechanics and other allied technical disciplines to buildings and installations structures and their parts building materials and prefabrications civil engineering technology and practice building and road construction machines construction site equipment housing equipment and fittings including modern systems of air conditioning as well as to hydrotechnical and irrigation constructions The Dictionary also includes a limited number of basic technical expressions and terms relating to allied disciplines such as architecture and town planning as well as airfield railway and underground construction The Dictionary does not list trade names of building materials parts and machines or the names of chemical compounds Nor does it give adverbial adjective or verbal terms International Plastics Engineering ,1962 *Who Owns Whom: United Kingdom and Republic of Ireland* ,1990 **Benn's Media** ,2003 **The County Families of the United Kingdom Or Royal Manual of the Titled and Untitled Aristocracy of Great Britain and Ireland** Edward Walford,1893 **The Architectural Review** ,1995 *Ajfocus* ,2003 **Advanced Materials, 1991-1992: Source book** J.
