Unaccusativity Puzzle:

The Unaccusativity Puzzle Artemis Alexiadou, Elena Anagnostopoulou, Martin Everaert, 2004 The phenomenon of unaccusativity is a central focus for the study of the complex properties of verb classes This book combines contemporary approaches to the subject with several papers that have achieved a significant status even though formally unpublished

Split Auxiliary Systems Raúl Aranovich, 2007 The alternation between the auxiliaries BE and HAVE which this collection examines is often discussed in connection with generative analyses of split intransitivity But this book's purpose is to place the phenomenon in a broader context Well known facts in the Romance and Germanic language families are extended with data from lesser studied languages and dialects Romanian Paduan and also with experimental and historical data Moreover the book goes beyond the usual language families in which the phenomenon has been studied with the inclusion of two chapters on Chinese and Korean The theoretical background of the contributors is also broad ranging from current Generative approaches to Cognitive and Optimality Theoretical frameworks Readers interested in the structural historical developmental or experimental aspects of auxiliary selection should profit from this book's comprehensive empirical coverage and from the plurality of contemporary linguistic analyses it contains

Auxiliary Selection Revisited Rolf Kailuweit, Malte Rosemeyer, 2015-03-05 A central debate about the description of auxiliary selection concerns the regularity of auxiliary selection from a typological perspective Thus studies of auxiliary selection have both stressed the fact that certain recurrent parameters are highly relevant to the description of auxiliary selection whereas other studies demonstrate significant differences in auxiliary selection systems By integrating the synchronic and diachronic levels of linguistic description the papers in the present volume work towards a framework that explains these contradictory findings They discuss the role of semantic and syntactic constraints in gradient auxiliary selection address the question of paradigmaticity of the have be alternation and shed light on the mechanisms of the gradual historical change from be to have selection The volume thus puts forth a row of innovative theoretical and empirical findings from a wide range of typologically diverse European languages that substantially broaden our knowledge about the mechanisms of auxiliary selection systems

Paths of Development in L1 and L2 acquisition Sharon Unsworth, Teresa Parodi, Antonella Sorace, Martha Young-Scholten, 2006-02-15 The main focus of generative language development research in recent decades has been the logical problem of language acquisition how learners go beyond the input to acquire complex linguistic knowledge This collection deals with the complementary issue of the developmental problem of language acquisition How do learners move from one developmental stage to another and how and why do grammars develop in a certain fashion Building on considerable previous research the authors address both general and specific issues related to paths of development These issues are tackled through considering studies of L1 and L2 children and L2 adults learning a range of languages including Dutch English French German Greek and Japanese

Structure Preserved C. Jan-Wouter Zwart, Mark de Vries, 2010-07-29

Structure is at the rock bottom of all explanatory sciences Jan Koster Forty years ago the hypothesis that underlying the bewildering variety of syntactic phenomena are general and unified structural patterns of unexpected beauty and simplicity gave rise to major advancements in the study of Dutch and Germanic syntax with important implications for the theory of grammar as a whole Jan Koster was one of the central figures in this development and he has continued to explore the structure preserving hypothesis throughout his illustrious career This collection of articles by over forty syntacticians celebrates the advancements made in the study of syntax over the past forty years reflecting on the structural principles underlying syntactic phenomena and emulating the approach to syntactic analysis embodied in Jan Koster's teaching and research

Structuring the Argument Asaf Bachrach, Isabelle Roy, Linnaea Stockall, 2014-07-24 While the argument structure of verbs has long been a central issue in linguistic research of all varieties and continues to be a vexed area of research across a wide range of theoretical and empirical approaches the inter disciplinary perspective and dialogue remain largely under explored This collection stems from an interest to find and explore practical tangible points of intersection between theoretical linguists psycholinguists and neurolinguists working on problems related to the representation and processing of verbs and their associated thematic structure The book is organized around three core themes i the basic building blocks of verbal representations and modes of construction of the verb argument complex ii non canonical argument structure realization with a particular focus on object experiencer psych verbs and iii the promises and challenges of neurolinguistic and psycholinguistic investigation into argument structure and the prospects for the future of interdisciplinary research on verb argument structure

Event Arguments: Foundations and Applications Claudia Maienborn, Angelika Wöllstein, 2011-12-22 Since entering the stage Davidsonian event arguments have taken on a central role in linguistic theorizing Recent years have seen a continuous extension of possible applications for them not only in semantics but also in syntax At the same time questions concerning the ontological status of events have received renewed attention This collection of articles provides new evidence for the virtually ubiquitous presence of event arguments in linguistic structure and sheds new light on their nature The volume is organized into four sections Events states causation Event nominals Events in composition Measuring events

Interdisciplinary Journal for Germanic Linguistics and Semiotic Analysis, 2005

The Acquisition of Aspect in a Second Language Stefano Rastelli, 2020-12-03 The acquisition of the aspect is a central area in Second Language Acquisition research the subject of hundreds of papers and dozens of edited volumes monographs and special issues This introduction provides the reader not only with a concise and plain presentation of the main hypotheses advanced in the past but also with an overview of contemporary research Stefano Rastelli shows how comparison of behavioural production comprehension processing and statistical data is improving and partially changing our understanding of how learners acquire the aspectual distinctions of the target language
