*Cellular Automata And Complexity* Stephen Wolfram,2018-03-08 Are mathematical equations the best way to model nature For many years it had been assumed that they were But in the early 1980s Stephen Wolfram made the radical proposal that one should instead build models that are based directly on simple computer programs Wolfram made a detailed study of a class of such models known as cellular automata and discovered a remarkable fact that even when the underlying rules are very simple the behaviour they produce can be highly complex and can mimic many features of what we see in nature And based on this result Wolfram began a program of research to develop what he called A Science of Complexity The results of Wolfram's work found many applications from the so called Wolfram Classification central to fields such as artificial life to new ideas about cryptography and fluid dynamics This book is a collection of Wolfram's original papers on cellular automata and complexity Some of these papers are widely known in the scientific community others have never been published before Together the papers provide a highly readable account of what has become a major new field of science with important implications for physics biology economics computer science and many other areas

Copyright, Data and Creativity in the Digital Age Julian Warner,2020-09-01 The Supreme Court of the United States in Feist v Rural 1991 required that databases must have a

minimal degree of creativity for copyright The judgment was highly significant and the subsequent period is understood as the post Feist era It has been globally influential However the decision is extremely complex and remains unsatisfactorily interpreted In particular it has been impossible to illuminate the creativity requirement The book gives an account of the decision s conceptual structure focusing on its full delineation of the opposite to creativity In a radical and unprecedented innovation it is correlated with an automatic computational process Creativity itself is understood as non computational or directly human activity concerned with meaning Determining the presence of creativity is reduced to a four stage test This work then has acute practical current relevance to property in data in the digital age it will also be of theoretical interest to and is aimed at researchers in practitioners and students of intellectual property worldwide
