Comprehensive revision of the coverage of human behavior in fire, including several new chapters on egress system design, occupant evacuation scenarios, combustion toxicity, and data for human behavior analysis. Revised fundamental chapters for a stronger sense of context. Added chapters on fire protection system selection and design, including selection of fire safety systems, system activation and controls, and CO₂ extinguishing systems. Recent advances in fire resistance design. Addition of new chapters on industrial fire protection, including vapor clouds, effects of thermal radiation on people, BLEVEs, dust explosions, and gas and vapor explosions. New chapters on fire load density, curtain walls, wildland fires, and vehicle tunnels. Essential reference appendices on conversion factors, thermophysical property data, fuel properties, and combustion data configuration factors and piping properties. Three volume set, not available separately.

The Future of Thermal Comfort in an Energy-Constrained World, Tim Law, 2013-04-19. The dissertation investigates the scientific and business factors that have resulted in air conditioning being a major contributor to climate change. With his architectural background, the author demonstrates how a design methodology not commonly adopted in scientific studies may actually be a suitable way of dealing with a complex problem: the business as usual scenario involving building science, sociological values, and consumer behavior. Using his innovations as case studies, the author shows how good ideas cannot be evaluated on scientific merit alone and demonstrates why commercialization may have a pivotal role in deployment of research-based technology. He advances the theory of personalized thermal comfort, which can potentially resolve the air conditioning conundrum. **Utah State Bulletin**, 2007, the official noticing publication of the executive branch of Utah State Government.
